Part1 （15 题+5 题必考题）：

必考题（5 题）：

Work or study

1. What subjects are you studying?
2. Do you like your subject?
3. Why did you choose to study that subject?
4. Do you think that your subject is popular in your country?
5. Do you have any plans for your studies in the next five years?
6. What are the benefits of being your age?
7. Do you want to change your major?
8. Do you prefer to study in the mornings or in the afternoons?
9. How much time do you spend on your studies each week?
10. Are you looking forward to working?
11. What technology do you use when you study?
12. What changes would you like to see in your school?

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

13. What work do you do?

14. Why did you choose to do that type of work (or that job)?

15. Do you like your job?

答案参考：

What subjects are you studying?

I'm majoring in Computer Science, focusing on artificial intelligence and data analysis.

Do you like your subject?

Yes, I love the problem-solving challenges and the creativity involved in developing tech solutions.

Why did you choose to study that subject?

I've always been passionate about technology's potential to address global issues. The career opportunities in tech also motivated my choice.

Do you think that your subject is popular in your country?

Yes, it's highly popular. With the tech industry booming, many students pursue Computer Science for its innovation and job prospects.

专业雅思教学，最全课前课后辅导，100 留学，全心为你

Do you have any plans for your studies in the next five years?

I aim to complete my bachelor's, then pursue a master's in AI. Long-term, I hope to work on sustainable tech projects.

What are the benefits of being your age?

At this stage, I have the freedom to explore diverse interests, learn from mistakes, and build a foundation for my future career.

Do you want to change your major?

No, I'm content with Computer Science. It aligns perfectly with my goals and keeps me intellectually stimulated.

The city you live in

1. What city do you live in?
2. Do you like this city? Why?
3. How long have you lived in this city?
4. Are there big changes in this city?
5. Is this city your permanent residence?
6. Are there people of different ages living in this city?
7. Are the people friendly in the city?
8. Is the city friendly to children and old people?

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

9. Do you often see your neighbors?

10. What's the weather like where you live?

11. Would you recommend your city to others?

答案参考：

What city do you live in?

I currently live in Nanjing, a historic city in eastern China. It's known as the "Capital of Six Dynasties" and blends ancient landmarks with modern urban life.

Do you like this city? Why?

Yes, I really enjoy living here. Nanjing offers a unique mix of cultural heritage,like the Ming Xiaoling Mausoleum,and vibrant city amenities, such as bustling shopping districts and green spaces like Xuanwu Lake. The balance between tradition and modernity makes it dynamic yet peaceful.

How long have you lived in this city?

I've lived here for about five years. I moved here for university and decided to stay after graduation because of the career opportunities and comfortable lifestyle.

Are there big changes in this city?

Definitely. Over the past decade, Nanjing has expanded its metro system, developed new tech hubs, and revitalized

historic areas. For instance, the Confucius Temple area was renovated to preserve its cultural charm while adding modern cafes and shops.

Is this city your permanent residence?

For now, yes. I appreciate its affordability and job prospects, but I'm open to relocating in the future if career opportunities arise elsewhere.

Are there people of different ages living in this city?

Absolutely. Nanjing attracts young professionals and students due to its universities and tech industries, while retirees often settle here for its healthcare facilities and slower pace in suburban neighborhoods. You'll see families, students, and elderly residents all coexisting harmoniously.

The area you live in

1. Do you like the area that you live in?
2. What are some changes in the area recently?
3. Do you know any famous in you area?
4. Where do you like to go to that area?

答案参考：

Do you like the area that you live in?

Yes, I do! I live in a quiet, tree-lined neighborhood in Nanjing. It's a perfect blend of convenience and tranquility,there are cafes, grocery stores, and a metro station within walking distance, but it's far enough from the city center to avoid noise and crowds.

What are some changes in the area recently?

The most noticeable change is the opening of a new shopping complex nearby, which includes a cinema and a rooftop garden. They've also widened the sidewalks and added bike lanes to promote cycling. Additionally, a historic temple in our area was recently restored, attracting more tourists.

Do you know any famous in you area?

Not personally, but Nanjing has a rich history, so many historical figures are associated with the city. For example, Sun Yat-sen, a revolutionary leader, has a mausoleum here. As for modern celebrities, I don't live near any, but the area is home to several local artists and writers.

Where do you like to go to that area?

I love spending weekends at a lakeside park called Xuanwu Lake. It's a great spot for jogging or just relaxing by the water. There's also a cozy bookstore-café where I often read or meet friends,it has a rustic vibe and serves amazing matcha lattes.

Home/accommodation

1. can you describe the place where you live?
2. Please describe the room you live in.
3. How long have you live there?
4. Who do you live with?
5. Do you plan to live there for a long time?
6. What is the difference between where you are living now and where you have lived in the past?
7. Do you prefer living in a house or a flat?
8. Are the transport facilities to your home very good?
9. What's your favorite room in your apartment or house？
10. What do you usually do in your apartment?
11. What kinds of accommodation do you live in?

答案参考：

can you describe the place where you live?

I live in a modern apartment in a mid-rise building in downtown Nanjing. It’s a lively area with cafes, supermarkets, and a metro station nearby. My neighborhood has a mix of

residential and commercial spaces, so it's convenient but still quiet enough for daily life.

Please describe the room you live in.

My bedroom is cozy and minimalist. The walls are light gray, and I have a large window that lets in plenty of natural light. There's a wooden desk by the window where I study, a bookshelf filled with novels and textbooks, and a single bed with neutral-colored bedding. I've decorated the room with a few framed travel photos and a small potted plant on the desk.

How long have you live there?

I've lived here for about two years. I moved here after starting university because the location is perfect,it's just a 10-minute walk to my campus.

Who do you live with?

I live with two roommates who are also students. We share the apartment, but each of us has a private bedroom. It's been a great way to split costs and make friends in a new city.

Do you plan to live there for a long time?

Probably not. Once I graduate next year, I might move closer to my workplace or find a place of my own. But for now, it suits my needs perfectly.

专业雅思教学，最全课前课后辅导，100 留学，全心为你

What is the difference between where you are living now and where you have lived in the past?

My current apartment is much more modern and spacious than my previous place. I used to live in a small, older apartment in the suburbs with my family. The area was quieter but less convenient.I had to commute an hour to school. Now, being downtown saves me time and keeps me connected to the city's vibrant energy.

Hometown

1. What ' s(the name of)your hometown?
2. Is that a big city or a small place?
3. How long have you lived there?
4. Do you like it?
5. Do you like living there?
6. What do you like (the most)about your hometown?
7. Is there anything you dislike about it?
8. do you think you will continue living there foe a long time?

答案参考：

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

专业雅思教学，最全课前课后辅导，100 留学，全心为你

What ' s(the name of)your hometown?

My hometown is Shantou, a coastal city in Guangdong Province, China.

Is that a big city or a small place?

It’s a mid-sized city, not as bustling as Guangzhou or Shenzhen, but it’s a significant economic hub in eastern Guangdong. Known for its port and overseas Chinese heritage, Shantou has a unique blend of local culture and modern development.

How long have you lived there?

I’ve lived here my entire life,over 20 years. My family has been rooted in Shantou for generations.

Do you like it?

Absolutely! Shantou offers a laid-back lifestyle compared to megacities. The vibrant food scene, especially fresh seafood and Teochew delicacies like beef meatballs and rice noodles (粿条), is unforgettable. Plus, the seaside scenery, like Nan’ao Island, adds a tranquil charm to daily life.

What do you like (the most)about your hometown?

The sense of community and cultural heritage. Traditional Teochew opera, temple fairs, and family-centric values create a warm, connected atmosphere. The coastal climate is

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

another perk,mild winters and breezy summers make it comfortable year-round.

Is there anything you dislike about it?

The traffic congestion in downtown areas can be frustrating. While infrastructure is improving, some neighborhoods still lack efficient public transport. Additionally, job opportunities in tech or creative industries are limited compared to first-tier cities.

do you think you will continue living there foe a long time?

Probably not permanently. I plan to explore career opportunities in larger cities after graduation, but Shantou will always be my roots. I'll return often to visit family and enjoy its unique culture and cuisine.

保留题：

1.Public places:

1.Have you ever talked with someone you don't know in public places?

Yes, definitely. I've had several occasions where I ended up chatting with strangers. For example, once I was waiting in a

long queue at a coffee shop, and the person behind me just started a conversation about the weather. We ended up talking about our favorite coffee flavors, and it was actually quite pleasant. I think in certain situations, like at a bus stop or in a park, people can be quite open to small talk. It's a nice way to kill time and sometimes you can even learn something new from a stranger.

2.Do you wear headphones in public places?

Yes, I often wear headphones when I'm out in public. The main reason is that I love listening to music or podcasts while I'm commuting or walking around. It helps me relax and also blocks out background noise, which can be quite distracting. Besides, wearing headphones sometimes gives a signal to others that I don't want to be disturbed, so it's kind of a way to have my own personal space even in a crowd.

2.Shoes:

1.Which do you prefer, comfortable shoes or pretty shoes?

Well, I have to say I'm definitely on the side of comfortable shoes. While I appreciate the design of stylish footwear, I

believe that comfort should be the top priority. This is mainly because I do a lot of walking in my daily life, whether it's commuting to work or just running errands. Wearing uncomfortable shoes can really ruin your day by causing blisters or foot pain. So, for me, practicality always comes first, though I'm always happy to find a pair that offers both comfort and a nice look.

2.Do you like to buy shoes online or offline?

I strongly prefer buying shoes offline in physical stores. The primary reason is that fit is crucial for me, and I need to try them on in person to see how they actually feel on my feet. Shopping in a store allows me to walk around a bit and check the size, width, and support properly. Also, I quite enjoy the experience of browsing with friends and getting their instant opinions. Having said that, I do occasionally browse online for inspiration or to check for specific styles.

3.How much money do you usually spend on shoes?

I would say I'm a fairly practical shopper. On average, I probably spend between 300 and 500 RMB for a standard pair of everyday shoes, like sneakers or flats. I'm willing to invest a bit more, maybe up to 800 RMB, for a high-quality pair that I know I'll wear very frequently, such as running shoes or

comfortable leather shoes for work. However, I rarely splurge on luxury or designer brands.

4.Do you like buying shoes? How often do you buy shoes?

I wouldn't call myself a shoe enthusiast, but I do enjoy it from time to time. It's not a hobby, but rather a necessity that I can find pleasure in. In terms of frequency, I don't shop for shoes very often. I'd say I probably buy two or three pairs a year, typically only when I need to replace an old worn-out pair or if I come across a pair that is exceptionally comfortable and versatile, often during seasonal sales.

3.Chatting:

1.Do you like to chat with friends?

Yes, absolutely. Chatting with friends is a huge part of my life and one of my favorite ways to unwind. It's not just about passing the time; it's a vital way for us to maintain our connection, share our thoughts, and support each other through life's ups and downs. A good conversation can instantly lift my mood.

2.What do yo chat about when meeting friends?

Oh, we talk about a wide range of things. The most common topics would be catching up on each other's lives, like recent events at work or in our studies. We also discuss our personal hobbies, such as a new TV series we're hooked on, or recommend books to each other. Of course, sometimes we just vent about daily frustrations or seek advice, which is really therapeutic.

3.Do you prefer chatting online or face to face?

While online chatting is incredibly convenient for quick updates, I have a strong preference for face-to-face conversations. The reason is that you get so much more than just words – you can see the person's body language, their facial expressions, and hear the tone of their voice, which makes the interaction much more genuine and profound. A conversation over a cup of coffee just can't be replaced by text messages.

4.Do you think people are chatting more and more these days?

That's an interesting question. I suppose in terms of the frequency of brief, digital communication, the answer is definitely yes. With social media and messaging apps, we're

constantly sending texts or voice messages. However, I wonder if the quality and depth of our conversations have kept pace. Sometimes it feels like we have more contacts but fewer meaningful, lengthy chats, as online communication tends to be more fragmented.

4.Advertisement:

1.Do you often see advertisement?

Absolutely, it's almost impossible to avoid them in today's world. I'm constantly exposed to advertisements on various digital platforms, especially on social media and video streaming sites. They pop up as sponsored posts between my friends' updates or as pre-roll ads before a YouTube video. Even when I'm offline, I see them on billboards while commuting or in public spaces like shopping malls.

2.Does advertising have a significant impact?

Yes, I believe it does, though the impact can vary from person to person. On one hand, advertising is incredibly powerful in building brand awareness and shaping consumer desires. For instance, a clever ad campaign can make a product go viral

overnight. On the other hand, many people have become more skeptical and use ad-blockers to avoid them. So, while it might not always lead to an immediate purchase, its cumulative effect on our perception and choices is undoubtedly significant.

3.Do you often remember the information in the advertisement?

To be honest, I rarely remember the specific details, like product specifications or prices. However, I tend to have a much stronger recall for advertisements that are either highly creative, emotionally touching, or genuinely humorous. What sticks in my mind is the overall feeling or the unique storytelling of the ad, rather than the factual information it's trying to convey.

5.Borrowing/Lending:

1.Have you ever lent a book to your friend?

Yes, I have, on numerous occasions. I'm an avid reader, so sharing good books with friends who have similar tastes is something I really enjoy. It often leads to fascinating discussions afterward. However, I have to admit, I'm always

a little hesitant if it's a book I'm particularly fond of, as I'm always worried about it getting damaged or not being returned.

2.Do you like lending things to others?

It really depends on what the item is and who I'm lending it to. For small, everyday things like a pen or a charger, I'm more than happy to help out. But when it comes to more expensive or personal belongings, like my laptop or my favorite novel, I become much more cautious. Trust is a key factor here – I'd only lend such items to very close friends whom I know will take good care of them.

3.Would you lend money to your friend?

This is a rather tricky situation. For a small amount of money to cover a meal or a taxi ride, of course, I wouldn't think twice. But if it's a substantial sum, I'd have to think very carefully. I believe mixing money and friendship can sometimes complicate the relationship. So, I might be hesitant, or I would only do it for a very close friend in a genuine emergency, with the clear understanding that it might affect our dynamic.

4.Would you lend your phone to your friend?

I have to say I'd be quite reluctant to do that. My phone is not just a communication tool; it contains a great deal of my private information, like photos, messages, and social media accounts. It's simply too personal and sensitive. In an absolute emergency, like needing to make an urgent call, I would hand it over, but I'd probably feel a bit uneasy until it was returned.

6.Rules:

1. Are there any rules for students at your school?

Yes, definitely. Every school has its own set of regulations to maintain order and a positive learning environment. The most common ones we had involved attendance, like being punctual for classes, and a dress code, such as wearing a uniform. There were also rules about respecting teachers and classmates, and of course, a strict policy against using mobile phones during lessons.

2. Do you think students would benefit more from more rules?

That's a complex issue. I believe there's a fine line to walk. While a clear framework of rules is essential for safety and

discipline, an excessive number of them might be counterproductive. Too many restrictions could stifle students' creativity and independence. So, it's not about the quantity, but the quality. Effective rules that promote a conducive learning atmosphere are beneficial, but simply adding more rules isn't necessarily the solution.

3. Have you ever had a really dedicated teacher?

Yes, I was fortunate to have one. My high school English teacher, Mrs. Li, was the epitome of dedication. She often stayed back after school to provide extra help for students who were struggling, and her passion for literature was truly infectious. What set her apart was that she didn't just teach from the textbook; she cared about our personal growth and always encouraged us to think critically.

4. Do you prefer to have more or fewer rules at school?

I personally lean towards having a reasonable number of essential rules. As I mentioned before, a complete lack of rules would lead to chaos, which is detrimental to learning. However, I also value personal freedom and the ability to make choices. Therefore, I believe the ideal scenario is to have a core set of fair and necessary rules that protect

everyone's right to learn, without micromanaging every aspect of student life.

5. Have you ever had a really strict teacher?

Certainly. I remember my mathematics teacher in middle school was notoriously strict, especially regarding homework deadlines and classroom discipline. While we were all quite intimidated by him at first, I later came to appreciate that his high standards pushed us to be more diligent and precise. In retrospect, his strictness came from a place of wanting us to build a solid foundation in the subject.

6.Would you like to work as a teacher in a rule-free school?

Honestly, the idea sounds quite challenging and potentially chaotic. While I appreciate creativity and flexibility, a complete absence of rules would make it very difficult to manage a classroom effectively and ensure the safety and productivity of all students. A certain level of structure is necessary. So, no, I don't think I would thrive in such an environment. I believe a balance of clear, fair rules and a positive, encouraging atmosphere is the key to a successful school.

7.Doing something well :

1.Do you have an experience that you did something well?

Yes, certainly. One experience that stands out was when I successfully organized a charity sale for my class in university. It was a fairly complex project involving coordinating volunteers, managing logistics, and promoting the event. Despite some initial hiccups, the event turned out to be a great success, and we raised a significant amount of money for a local animal shelter. I felt a real sense of accomplishment because it was the culmination of a lot of hard work and effective teamwork.

2.Do you have an experience that your teacher thought you did a good job?

Absolutely. I remember in my final year of high school, I worked extremely hard on a history research paper about the Cold War. I spent weeks gathering sources and crafting my argument. When my teacher returned it, she had written very positive comments, praising my thorough analysis and clear writing style. She even read a paragraph aloud to the class as an example of good work. It was an immense sense of

validation and it really boosted my confidence in my academic abilities.

3.Do you often tell your friends when they do something well?

Yes, I make a conscious effort to do so. I strongly believe in the power of positive reinforcement. Whether it's congratulating a friend on acing a difficult exam or simply acknowledging their kindness in helping someone, I think it's important to voice our appreciation. Not only does it strengthen our bond, but it also encourages them to keep up the good work. It's a small gesture that can genuinely make someone's day.

8.Museum

1.Do you like to visit museums?

Yes, I'm quite fond of visiting museums. I see them as gateways to the past and windows into different cultures. It's not just about looking at artifacts; it's an immersive experience that allows me to understand history and art on a much deeper level than reading a textbook. I always find it fascinating and humbling to see historical objects up close.

2.How often would you go there?

I wouldn't say I go frequently, but I try to visit one whenever I travel to a new city, as I believe the local museum offers the best introduction to its history and character. In my own city, I probably go a couple of times a year, usually when there's a special exhibition that piques my interest or when I have friends or family visiting.

3.Do you think museums are important?

Absolutely, I believe they play a vital role in society. Firstly, they are custodians of our cultural heritage, preserving invaluable artifacts for future generations. Secondly, they serve as dynamic educational institutions, making learning interactive and accessible for people of all ages. Beyond that, they provide a communal space for people to gather and share a cultural experience.

4.When was the last time do you visited a museum?

The last time I visited a museum was about two months ago. I went to the Provincial Museum with a friend who was in town. They had a fascinating exhibition on ancient Chinese ceramics, and I was particularly impressed by the exquisite craftsmanship and the evolution of styles across different dynasties. It was a very rewarding afternoon.

5.Should there be more museums?

I think it's a great idea in theory, but it should be done strategically. Rather than just increasing the number, the focus should be on establishing museums in underserved communities and on diverse topics, like science, technology, or niche historical events, to cater to different interests. The key is to ensure they are well-funded and creatively curated to attract and engage the public, rather than just being static repositories.

9.Plants:

1.Do you keep plants at home?

Yes, I do. I've developed a bit of a hobby for indoor gardening over the past couple of years. My apartment has several potted plants, like snake plants and pothos. They don't just serve as decorative elements; I find the process of caring for them – watering, pruning, and watching them grow – to be a very calming and therapeutic ritual that helps me unwind after a busy day.

2.What plant did you grow when you were young?

My earliest gardening memory was in primary school when our teacher had us grow green beans from seeds. It was a simple science project. We planted the seeds in little paper cups, made sure they got enough sunlight and water, and tracked their growth. I remember feeling a real sense of wonder and excitement when the first tiny green shoots emerged from the soil.

3.Do you know anything about growing a plant?

Yes, through my experience with my houseplants, I've picked up some fundamental knowledge. I understand that different species have varying requirements for sunlight, water, and soil type. For instance, overwatering is a common mistake that can lead to root rot. I've also learned about the importance of fertilization during the growing season to provide essential nutrients.

4. Do Chinese people send plants as gifts?

Yes, it's a fairly common and meaningful practice. Potted plants, especially ones that symbolize good fortune, are popular gifts for occasions like business openings or moving into a new home. For example, a 'Lucky Bamboo' or a 'Money Tree' is believed to bring prosperity. However, it's worth noting that giving potted plants as gifts to patients in

hospitals is sometimes avoided, as there's a superstition that the plant's roots being 'rooted' might symbolize the illness staying.

10.Growing vegetables/Fruits :

1.Is growing vegetables popular in your country?

Yes, I'd say it's quite popular, but the context varies. In rural areas, it's a time-honored tradition and often a practical necessity, with many families having their own plots to grow food. In cities, while space is limited, we've seen a growing trend of urban gardening—people growing herbs, tomatoes, or peppers on their balconies. It's not just about the food; it's considered a relaxing hobby and a way to ensure fresh, organic produce.

2.Do many people grow vegetables in your city?

It's not the majority, but a significant number of people do engage in it, especially among the older generation and gardening enthusiasts. You can often spot small vegetable patches in community gardens or on sunny balconies. I think the desire to connect with nature and have control over one's

food source is a key driver, turning it from a mere pastime into a meaningful activity for many.

3.Do you think it's easy to grow vegetables?

That's a good question. While the basic concept of planting a seed and watering it is straightforward, I believe successful gardening is actually quite nuanced. It requires a good understanding of factors like soil quality, appropriate sunlight, and pest control. For beginners, starting with resilient plants like chili peppers or spring onions can be relatively easy, but mastering it to achieve a high yield is undoubtedly challenging.

4.Should schools teach students how to grow vegetables?

Absolutely, I think it's a brilliant idea. Incorporating it into the curriculum offers multifaceted benefits. It provides invaluable hands-on education about biology and the environment. More importantly, it instills an appreciation for where our food comes from, promoting healthier eating habits. On a broader level, it can teach students about sustainability and patience, which are essential life skills.

专业雅思教学，最全课前课后辅导，100 留学，全心为你

11.Staying with old people:

1.Have you ever worked with old people?

While I haven't had the experience of working alongside elderly colleagues in a formal job setting, I have collaborated with older individuals in other contexts. For instance, I volunteered at a community center where I helped organize activities for senior citizens. Additionally, in university group projects, I sometimes worked with mature students who were returning to education, and that was a very insightful experience.

2.Are you happy to work with people who are older than you?

Yes, absolutely. I'm always eager to work with people who are older than me. I see it as a valuable learning opportunity. They often bring a wealth of life and professional experience to the table, which can provide nuanced perspectives that younger colleagues might not have. While there can sometimes be a difference in working styles or communication preferences, I believe the benefits of their mentorship and wisdom far outweigh any potential challenges.

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

3.What a re the advantages of working with old people?

There are several distinct advantages. Firstly, their extensive experience means they often have a proven track record of problem-solving and can navigate complex situations with a calmness that comes from having seen similar challenges before. Moreover, they usually possess a deep well of professional knowledge and can offer invaluable mentorship. Finally, they tend to have a strong sense of responsibility and emotional stability, which contributes significantly to a harmonious and productive work environment.

4.Do you enjoy spending time with old people?

Yes, I genuinely do. I find that conversations with older people are often incredibly enriching. They have a treasure trove of life stories and historical perspectives that you simply can't get from a book. I love listening to their anecdotes and the wisdom they've gained over the years. It not only broadens my horizons but also offers a sense of continuity and a calming presence that is sometimes missing in our fast-paced modern life.

12.Having a break:

1. How often do you take a rest or a break?

I make it a point to take short breaks regularly throughout the day, especially when I'm working or studying intensively. I typically follow a technique where I focus for about 60 to 90 minutes and then allow myself a 10 to 15-minute break. This helps me maintain concentration and prevents mental fatigue, making me more productive overall.

2. What do you usually do when you are resting?

It depends on the context. For a short break during work, I'll do something completely different to refresh my mind, like stretching, making a cup of tea, or scrolling through social media for a few minutes. For a longer rest period, like on a weekend afternoon, my ideal way to unwind is to read a novel for pleasure, listen to a podcast, or go for a leisurely walk in a nearby park.

3. Do you take a nap when you are taking your rest?

I'm a firm believer in the power of a power nap, but I have to be strategic about it. If I'm feeling particularly drained in the early afternoon and my schedule allows, I might take a brief nap of around 20 minutes. However, I avoid napping for too

long or too late in the day, as that can disrupt my nighttime sleep, leaving me feeling even groggier.

4. How do you feel after taking a nap?

It's a bit of a double-edged sword. A short, well-timed nap is incredibly rejuvenating; it feels like a system reboot for my brain, leaving me refreshed, alert, and ready to tackle the rest of the day. Conversely, if I oversleep or nap at the wrong time, I wake up with what's called 'sleep inertia' – feeling disoriented and even more tired than before, which is quite counterproductive.

13.Crowded place:

1. Is the city where you live crowded?

Yes, definitely. I live in a metropolitan city that is notoriously crowded, especially during rush hours. The streets are always bustling with traffic, and public transportation like the subway can be overwhelmingly packed. While this density brings vibrancy and convenience, it also inevitably leads to issues like noise and a lack of personal space.

2. Is there a crowded place near where you live?

Yes, there is. The nearest subway station is a prime example of a perpetually crowded place. It's a major transit hub, so regardless of the time of day, you'll always find a constant stream of commuters rushing in and out. The pedestrian street adjacent to it is also constantly packed with shoppers and tourists, making the entire area a hive of activity.

3. Do you like crowded places?

It really depends on the context and my mood. I enjoy the energetic atmosphere of crowded places occasionally, like at a festival or a lively night market, as it can be exhilarating. However, on a daily basis, I tend to avoid them. I find constant exposure to large crowds quite draining and stressful, and I value my personal space and tranquility.

4. Do most people like crowded places?

I believe it's a matter of personal preference, and there's no definitive answer. Extroverted individuals might thrive in crowded, social settings as they draw energy from the buzz and interaction. On the contrary, more introverted people likely find them overwhelming and prefer quieter, more intimate environments. So, I suppose it's split, largely depending on one's personality.

5. When was the last time you were in a crowded place?

The last time was just last weekend. I went to a popular shopping mall to buy a gift for a friend's birthday. To my dismay, it was incredibly packed, presumably because of a seasonal sale. Navigating through the crowds was quite a challenge, and the long queues at the checkout counters required a great deal of patience.

14.Going out:

1. Do you bring food or snacks with you when going out?

It depends on the situation. For short trips around the city, I usually don't bother, as it's convenient to buy something if needed. However, if I'm heading out for a long day trip, a hike, or a journey, I definitely pack some lightweight snacks like energy bars or a piece of fruit. It's a practical habit that helps maintain my energy levels and saves money.

2. Do you always take your mobile phone with you when going out?

Yes, without exception. My phone has become an indispensable part of my daily life. It's not just a communication tool; it's my camera, my map, my wallet, and my source of information. Frankly, I'd feel quite anxious and disconnected if I left home without it, as it's central to how I navigate both the digital and physical world.

3. Do you often bring cash with you?

Not really. In an era dominated by mobile payments, I rarely use cash on a daily basis. I primarily rely on my phone for almost all transactions, from buying coffee to paying for public transport. That said, I still make it a habit to carry a small amount of cash as a backup for emergencies, like if a vendor doesn't accept digital payments or there's a network issue.

4. How often do you use cash?

My use of cash is now negligible. I'd estimate that over 95% of my payments are made digitally. The only times I find myself using cash are for very small-scale transactions at a local market, or occasionally tipping in some situations. For me, cash has become a contingency plan rather than a primary payment method.

15.Sharing:

1. Do your parents teach you to share when you were child?

Yes, absolutely. My parents always encouraged me to share from a very young age, especially with my cousins or friends when we played together. They would gently remind me that sharing helps everyone feel included and happy. I remember my mum often saying, “If you share your toys, you’ll have more fun playing together.”

2. What kind of things do you share with others?

I usually share everyday items like books, snacks, or notes with classmates. I also share digital content, such as interesting articles or videos online. With close friends, I’m more likely to share personal stuff—like thoughts, feelings, or even small problems—when I need advice or just want to talk.

3. What kind of things are not suitable for sharing?

Well, I think personal hygiene items, like toothbrushes or towels, shouldn’t be shared for health reasons. Also, very private information—such as passwords or sensitive family matters—is better kept to yourself. Sometimes, if something

belongs to someone else and they haven't given permission, it's better not to share it either.

4. Do you have anything to share with others recently?

Actually, yes. Just last week I read a really inspiring article about environmental protection, and I shared it on my social media. I thought it was worth spreading because it offered practical tips on reducing plastic waste, something many of my friends care about.

5. Who is the first person you would like to share good news with?

Usually, my mum. She's always been my biggest supporter, so whenever something good happens—like doing well on an exam or getting a job interview—I can't wait to tell her first. Her reaction always makes me even happier.

6. Do you prefer to share news with your friends or your parents?

It depends on the type of news. For everyday updates or fun stories, I'd probably tell my friends first because we have similar interests. But for more important or life-changing news, I tend to turn to my parents because I value their experience and guidance.

Part2&3 新题（25 道）

1.擅长音乐的朋友

A friend of yours who is good at music/singing

You should say:

Who he/she is

When/Where you listen to his/her music/singing

What kind of music/songs he/she is good at

And explain how you feel when listening to his music/singing

I'd like to talk about my university friend, Clara, whose singing voice is truly captivating. She wasn't a music major, but her talent was something everyone in our circle of friends admired.

Clara and I were part of the same student club, and we often had casual gatherings. That's when I first had the chance to listen to her sing. It was usually in very intimate settings—like during a bonfire night on the campus lawn, or at a friend's

cozy apartment. She never needed any formal invitation; someone would just bring out a guitar, and she would naturally join in. I remember one particular time, we were on a road trip, and as we drove through the night, she sang softly in the car. The combination of her voice and the passing city lights created a moment that felt straight out of a movie.

She has a particular affinity for soulful folk and acoustic pop music. Her voice is clear, warm, and has a slight, gentle vibrato that lends a lot of emotion to her songs. She excels at singing heartfelt ballads by artists like Taylor Swift and Ed Sheeran, but she also has a knack for putting her own delicate spin on popular tunes, making them feel more personal and introspective.

The feeling I get when listening to her sing is a mix of deep relaxation and genuine admiration. There's an undeniable sense of tranquility that washes over me; her voice has a very calming effect that can make all my worries momentarily fade away. More than that, I feel a sense of privilege. In an age where we're constantly bombarded by highly-produced commercial music, listening to a pure, unplugged live performance from a friend feels authentic and special. It's a

raw and personal form of artistic expression that I find incredibly moving. It reminds me that true talent isn't always about fame, but about the ability to touch people's hearts in a genuine way.

Part3

1.What kind of music is popular in your country?

In China, the music scene is incredibly diverse, so it's hard to pinpoint just one genre. However, Mandopop is undoubtedly one of the most mainstream and widely enjoyed genres across all age groups. Alongside that, C-pop idols and their energetic dance tracks have a massive following among the youth. Simultaneously, there's a thriving independent scene, and with the influence of streaming platforms, international genres like K-pop, Western pop, and hip-hop have also gained substantial popularity.

2.What kind of music do young people like?

Young people's tastes are quite eclectic, but they tend to gravitate towards music that is energetic, relatable, and has a strong sense of identity. Upbeat genres like pop, electronic dance music, and hip-hop are hugely popular as they are perfect for social settings, workouts, or simply boosting one's

mood. Furthermore, many young listeners are drawn to artists whose lyrics explore themes of love, personal struggles, and self-discovery, as they can form a deep emotional connection with the music.

3.Do you think music is beneficial for children at school?

Absolutely, I believe it's profoundly beneficial. Integrating music into the school curriculum goes far beyond just teaching children how to sing or play an instrument. It serves as a crucial creative outlet and has been shown to enhance cognitive abilities, such as improving memory and concentration, which can positively impact their performance in other academic subjects. Moreover, group musical activities, like a choir or a band, teach children invaluable lessons in teamwork, discipline, and building collective confidence.

4.What are the benefits of children learning a musical instrument?

The benefits are multifaceted. On a cognitive level, it boosts brain development, enhancing areas related to memory, mathematical understanding, and spatial-temporal skills. On a personal level, it teaches perseverance and discipline, as mastering an instrument requires consistent practice and

patience. It also provides a great sense of accomplishment and can be a lifelong source of joy and stress relief. Furthermore, it can foster cultural appreciation and improve fine motor skills.

5.Do you know what kind of music children like today?

From my observation, children today are primarily exposed to and enjoy very catchy and rhythm-driven music. This includes animated movie soundtracks from Disney or Pixar, which are designed to be memorable and fun. They also love upbeat pop songs they hear on social media platforms like TikTok, where short, viral audio clips can make a song incredibly popular overnight. The music they like is often characterized by simple, repetitive hooks and cheerful melodies.

6.Do you think the government should invest more money on concerts?

That's a nuanced issue. I believe strategic investment in public concerts, especially those that are free or low-cost, can be highly beneficial for the community. It makes cultural and artistic experiences more accessible to the general public, enriching the cultural life of a city. Such events can also boost local economies by attracting tourism. However, the

government should strike a balance. While supporting large-scale concerts is good, it's equally, if not more important, to fund music education in schools and support grassroots artists and local music scenes, which are the foundation of a healthy and diverse cultural ecosystem.

2.重要的好朋友

A good friend who is important to you

You should say:

Who he/she is

How/Where you got to know him/her

How long you have known each other

And explain why he/she is important to you

I'd like to talk about my closest friend, Leo. He has been a pivotal figure in my life for well over a decade.

We first crossed paths in our high school biology class. We were assigned as lab partners for a dissection project, and let's just say that facing that challenge together created an

instant bond. Our friendship, however, truly solidified when we discovered a shared passion for rock music and basketball. We spent countless afternoons after school either on the court or discussing our favorite bands.

We've known each other for about twelve years now. It's remarkable to think about how we've transitioned from awkward teenagers to working adults side by side. We've witnessed each other's journeys through pivotal life stages, from the pressures of university entrance exams to navigating our first careers and relationships.

The reason Leo is so important to me transcends mere shared history. Firstly, he is my most trusted confidant and sounding board. I can discuss anything with him without fear of judgment, whether it's a trivial daily frustration or a profound life dilemma. He possesses an innate ability to offer perspective, sometimes by just listening, and other times by giving brutally honest, yet always well-intentioned, advice.

Secondly, and perhaps more importantly, he has been my staunchest supporter and motivator. There was a period after graduation when I felt utterly lost about my career direction.

While I was full of self-doubt, Leo was the one who consistently pointed out my strengths and encouraged me to take calculated risks. His unwavering belief in me often gave me the courage to believe in myself. He doesn't just celebrate my successes; he helps me navigate my failures, reminding me that my worth isn't defined by a single setback.

In essence, our friendship is a cornerstone of my life. It provides a unique combination of unconditional support, intellectual stimulation, and profound emotional security that is truly irreplaceable.

Part3

1.Do you think it is better for children to have a few close friends or many casual friends?

This is an interesting debate. I believe quality trumps quantity when it comes to childhood friendships. Having a few close, dependable friends is more beneficial for a child's emotional development. These deep bonds provide a safe space for them to build trust, learn empathy, practice conflict resolution, and develop a strong sense of self-worth. They learn the value of loyalty and intimacy.

That said, having a wider circle of casual friends also has its merits. It helps children develop social skills, adaptability, and the ability to navigate different group dynamics. It exposes them to diverse perspectives and interests.

Ultimately, a healthy balance is ideal. A child with a small core of truly close friends for deep connection, complemented by a broader social network for fun and variety, is in a great position to develop into a well-rounded social being.

2.Do you think a child's relationship with friends can be replaced by that with other people, like parents or other family members?

No, I don't believe these relationships are interchangeable; they serve distinct and complementary roles in a child's life.

The relationship with parents and family is primarily vertical, based on care, protection, and authority. It provides a foundation of safety and unconditional love. However, friendships are horizontal relationships among equals. It is within these peer relationships that children learn crucial lessons they can't fully learn from adults: how to negotiate,

cooperate, compete healthily, and assert their own identity outside the family unit.

A friend is often the first person a child confides in about something they might not tell their parents, for fear of judgment or punishment. This independent emotional outlet is vital for developing autonomy. While family provides the anchor, friends are the fellow ships with whom a child learns to sail the social seas. Both are essential, but one cannot replace the unique functions of the other.

3.想了解的野生动物

A wild animal that you want to know more about.

You should say:

What it is

When you saw it

Where you saw it

And explain why you want to know more about it

The wild animal I'm most fascinated by and eager to learn more about is the snow leopard. It's an incredibly elusive and majestic creature, often referred to as the "ghost of the mountains."

I've never been fortunate enough to see one in the wild. My first encounter with this stunning animal was through a BBC documentary series called "Planet Earth" a few years ago. There was a specific segment dedicated to tracking these cats in the high altitudes of the Himalayas. The footage was groundbreaking at the time, as it was incredibly difficult to film them in their natural habitat.

Watching them on screen was a captivating experience. I saw it in the comfort of my own living room, but the documentary transported me to their rugged, snow-covered world. The sight of a snow leopard, with its thick, smoky-grey fur patterned with dark rosettes, silently navigating a sheer cliff face, was both awe-inspiring and humbling.

The reason I want to know more about the snow leopard is threefold. Firstly, their remarkable adaptation to one of the planet's harshest environments is a biological marvel. I'm

curious about their physiology – how their wide, fur-covered paws act as natural snowshoes, how their enormous tail helps with balance and provides warmth when they wrap it around themselves, and how their nasal cavities warm the frigid air before it reaches their lungs.

Secondly, their elusive nature and solitary behavior intrigue me. Unlike other big cats, they lead largely solitary lives across vast territories. I wonder about their communication methods, their hunting strategies in such a sparse landscape, and the secretive lives they lead far from human eyes.

Finally, my interest is driven by a sense of conservation. Snow leopards are classified as vulnerable, facing threats from habitat loss and poaching. By understanding more about their behavior, population dynamics, and role in the ecosystem as an apex predator, I believe we can better contribute to global efforts aimed at ensuring their survival for generations to come.

Part3

1.Why are some people more willing to protect wild animals than others?

This disparity in attitude often stems from a combination of factors, primarily education, personal values, and direct experience.

People with higher levels of environmental literacy are more likely to understand the intricate connections within ecosystems. They recognize that the loss of a single species, like a predator, can have a cascading effect on the entire environment. This systemic understanding motivates them to advocate for protection.

Furthermore, it's a matter of values and empathy. Some individuals possess a strong intrinsic belief in the intrinsic right of other species to exist, irrespective of their direct utility to humans. This ethical standpoint, combined with a deep sense of empathy for other living beings, fuels their passion for conservation.

Lastly, direct exposure plays a crucial role. Someone who has spent time in nature, perhaps observing animals in the wild or even through compelling documentaries, is more likely to

develop a personal connection and feel a sense of responsibility. In contrast, for those who are geographically or emotionally detached from wildlife, the issue can feel abstract and less urgent.

2.Do you think it's important to take children to zoo to see animals?

This is a complex issue with valid arguments on both sides. On the one hand, well-managed, modern zoos with high welfare standards can play a significant educational role. For many city-dwelling children, a zoo might be their only chance to see a live elephant or a tiger, fostering a sense of wonder and a early connection to the natural world. This firsthand experience can be a powerful catalyst for inspiring future generations of conservationists.

However, the ethical concerns cannot be ignored. The confinement of large, wide-ranging animals in enclosures that cannot fully replicate their natural habitat can be problematic and may cause stress or stereotypical behaviors.

Therefore, I believe the answer lies in the quality and purpose of the zoo. If the primary focus is on education, conservation breeding programs for endangered species, and providing exemplary animal welfare, then it can be a valuable experience. But it should be complemented with teaching children about the importance of protecting animals in their wild habitats, ensuring that the zoo visit is a starting point for a broader environmental consciousness, rather than an end in itself.

4.一个你感兴趣的学科领域（心理学、药学）

A scientific field that interests you (e.g., psychology, pharmacology).

You should say:

What the field is

When you first became interested in it

What you have learned about it

And explain why you find this field interesting.

The scientific field that has always captivated me is psychology, which is the systematic study of the human mind and behavior.

My interest was first sparked during my final year of high school. We had a brief introductory module on social psychology, and I was instantly hooked by a classic experiment called the "Milgram Obedience Study." The findings—that ordinary people could be influenced to perform actions against their own conscience under authority—were both startling and profoundly revealing. It made me realize that human behavior is often far more complex and influenced by hidden forces than it appears on the surface.

Since then, I've actively sought to learn more through online courses, podcasts, and popular science books. I've been particularly fascinated by concepts like cognitive biases—the systematic errors in thinking that our brains make, such as "confirmation bias," where we tend to favor information that confirms our existing beliefs. Understanding this has completely changed how I consume news and engage in debates. Another fascinating area is neuroplasticity, the brain's remarkable ability to reorganize itself by forming new

neural connections throughout life. This shatters the old notion that the brain is fixed in adulthood and highlights the power of habit and continuous learning.

The reason I find psychology so compelling is that it's not just an abstract science; it's a lens through which I can understand myself and the people around me on a deeper level. It provides a framework for deciphering why we feel what we feel, why we make the decisions we do, and how we relate to one another. Learning about it has made me more self-aware, more empathetic, and better equipped to manage my own emotions and interpersonal relationships. Ultimately, it feels like studying the very operating system of human experience, which is endlessly fascinating.

Part3

1.Are science majors popular in schools?

Yes, science majors remain highly popular and are often considered foundational to a modern education. In many countries, there's a strong emphasis on STEM fields (Science, Technology, Engineering, and Mathematics) due to their

direct link to technological innovation and economic development. Consequently, majors like computer science, engineering, and biomedicine are particularly sought-after by students seeking promising career prospects. However, the popularity can fluctuate based on perceived job market demands and societal trends.

2.Are museums more beneficial for young people to learn about science?

Science museums offer unique benefits that complement traditional classroom learning. They make abstract concepts tangible and interactive. The hands-on exhibits, immersive simulations, and visual demonstrations can ignite a sense of wonder and curiosity in a way that a textbook often cannot. This experiential learning is particularly effective for young people, as it transforms science from a set of facts to be memorized into a dynamic process of discovery.

However, I wouldn't say they are universally "more" beneficial. Their role is complementary. Classrooms provide the necessary theoretical foundation and structured curriculum, while museums reinforce and bring that theory to

life. The ideal approach is a combination of both, where formal education is enriched by the engaging, real-world context that a good science museum provides.

3.What was the most useful scientific product of the last century?

This is a challenging question, but I would argue that the integrated circuit, or the microchip, is a top contender for the most useful scientific product. It is the fundamental building block of the digital revolution. Without it, we wouldn't have personal computers, smartphones, the internet, or the vast array of modern medical, communication, and industrial technologies that define our current era. While other inventions like antibiotics or the discovery of DNA structure were monumental, the microchip's pervasive role in enabling and accelerating nearly every other field of technology makes its impact unparalleled in terms of shaping the modern world.

4.Is learning science important?What are the applications of science in daily life?

Absolutely, learning science is crucial. Its importance extends far beyond training future scientists. Firstly, it

cultivates critical thinking and problem-solving skills. The scientific method—based on observation, hypothesis, experimentation, and evidence—provides a powerful toolkit for navigating an increasingly complex world, helping people distinguish fact from misinformation.

In terms of daily applications, science is utterly inseparable from our lives:

Health and Medicine: From the antibiotics that cure infections and the vaccines that prevent diseases to the medical imaging technologies that diagnose ailments, science underpins modern healthcare.

Technology and Communication: The smartphones we rely on, the GPS that guides us, and the internet that connects us globally are all products of physics, engineering, and computer science.

Food and Environment: Agricultural science ensures food security, and environmental science helps us understand and address challenges like climate change and pollution.

In short, science is not just a subject; it's the framework that explains the world around us and drives progress in almost every aspect of our daily existence.

5.天赋

A natural talent that you have

(e.g.music/mathematics)

You should say:

What it is

Why it is your natural talent

When you use it

And explain how you feel about it

The natural talent I'd like to talk about isn't something flashy like playing an instrument, but rather a softer skill: I believe I have a natural aptitude for empathy and making people feel at ease.

I consider this a talent because, for as long as I can remember, people have tended to open up to me quite easily, even upon first meeting me. Friends often tell me that I'm a good listener and that they feel understood and non-judged when talking to me. It seems to be an innate knack for picking up on subtle emotional cues—tone of voice, body language—and responding in a way that makes the other person feel heard. While skills like active listening can be learned, the intuitive part of it has always felt instinctive to me.

I use this talent in virtually every aspect of my life. In my personal relationships, it helps me be a supportive friend and family member, allowing me to navigate conflicts with more understanding and offer comfort when it's needed. In academic group projects, I often find myself mediating disagreements and ensuring that every team member feels their voice is valued, which fosters a more collaborative and productive atmosphere.

How I feel about this talent is a mixture of gratitude and responsibility. I'm genuinely grateful for it because it has allowed me to form deep, meaningful connections with

people, which I consider one of the greatest riches in life. However, I also feel a sense of duty to use it wisely. It can be emotionally draining at times, as absorbing others' feelings requires a lot of energy. Therefore, I've learned to set boundaries for my own well-being. Ultimately, I see this talent not as something for self-promotion, but as a tool to create a little more kindness and understanding in my immediate circle, and that is a deeply fulfilling feeling.

Part3

1.What kind of talents do children have?

Children possess a wide spectrum of talents, which can be broadly categorized. There are academic and analytical talents, such as a natural flair for mathematics, language acquisition, or logical reasoning. Then there are artistic and creative talents, like an innate sense of rhythm in music, a keen eye for visual arts, or a vivid imagination for storytelling. Importantly, we mustn't overlook social and interpersonal talents. Some children are natural leaders, organizers, or, like I mentioned before, show remarkable empathy and emotional intelligence from a very young age.

2.How can we know a child have talent or not?

Identifying a child's talent requires attentive observation over time. The key indicators are rapid learning, deep focus, and intrinsic motivation in a particular area. If a child picks up a new skill in that domain with unusual speed and ease, becomes completely absorbed in related activities (entering a state of "flow"), and pursues it driven by genuine joy and curiosity rather than external pressure, these are strong signals of a natural talent. However, it's crucial to distinguish a true talent from a passing interest or a skill developed through intense, early-stage drilling.

3.What are the consequences of overly demanding children to do things?

Overly demanding behavior from parents or teachers can have severe negative consequences. Psychologically, it can lead to chronic anxiety, burnout, and a crippling fear of failure. The child's self-esteem may become entirely tied to their performance, making them vulnerable to depression if they don't meet the high expectations. Furthermore, it often kills intrinsic motivation. An activity that was once a source of joy

can become a chore, leading to resentment and rebellion. In the long run, this pressure can damage the parent-child relationship and hinder the development of the child's own identity and passions.

4.How useful talent is for society?

Talent is the engine of progress and the soul of culture for any society. Specific talents drive innovation. The innate analytical minds of scientists and engineers lead to technological breakthroughs; the creative talents of artists, musicians, and writers enrich our cultural landscape and provide social commentary. Moreover, wider social talents, like the empathy I described, are the glue that holds communities together. They foster cooperation, effective leadership, and compassionate social services. A society that recognizes and nurtures diverse talents is one that is more dynamic, resilient, and humane.

5.Is it a waste of time if people don't use their talents?

This is a profound question. I wouldn't categorically label it as a "waste," as that implies a judgment on an individual's life choices. However, it can certainly represent a lost

opportunity for both the individual and the community. For the person, not using a talent might lead to a lack of fulfillment or a sense of "what could have been." For society, we lose the potential benefits that their unique gift could have brought. That said, people have multifaceted lives and responsibilities. A talent for painting might bring joy as a private hobby rather than a public career, which is still a valuable use of it. The real tragedy is when a talent remains entirely undiscovered or suppressed due to a lack of opportunity or encouragement.

6.和朋友的晚餐

A time when you had dinner together with your friend

You should say:

When it was

What did you eat

What did you talk about

and explain how do you feel about it

I'd like to talk about a very recent and memorable dinner I had with my close friend, Clara, just last weekend. It was a long-overdue catch-up session.

We went to a cozy, family-run Italian restaurant in my neighborhood that we both adore. The atmosphere was warm and inviting, perfect for a long conversation. For food, we decided to share a classic Margherita pizza and a portion of spaghetti carbonara. To top it off, we indulged in a slice of rich tiramisu for dessert, which was absolutely divine.

The conversation flowed effortlessly throughout the evening. Initially, we spent a great deal of time catching up on the nitty-gritty of each other's lives—our work projects, daily hassles, and funny anecdotes from the past few weeks. But the talk soon deepened. Clara has been contemplating a career shift, so we spent a substantial amount of time discussing her aspirations, fears, and the potential paths she could take. I offered my perspective and encouragement, and we also reminisced about our university days, laughing about some of the naive dreams we used to have.

The entire experience left me feeling deeply content and reconnected. In our fast-paced daily routines, it's easy to let friendships become confined to quick text messages. This dinner provided a dedicated, unhurried space to truly be present with each other. It wasn't just about the delicious food; it was about the emotional nourishment. I felt a renewed sense of closeness and was reminded of how invaluable it is to have a friend with whom you can share both your trivial updates and your most profound contemplations. It was a simple evening, but it significantly lifted my spirits and strengthened our bond.

Part3

1.Why do people nowadays less and less willing to have meals with their families?

This is a complex issue driven by several modern societal factors. The primary reason is the demanding and fragmented schedules of family members. Long and often unsynchronized working hours, coupled with children's heavy academic loads and extracurricular commitments, make it difficult to find a common time to sit down together. Furthermore, the invasion of technology plays a significant

role. Even when families are physically present at the table, attention is often divided by smartphones and other screens, which diminishes the incentive to prioritize a shared meal. Lastly, a shift towards greater individualism might mean that people sometimes prioritize personal leisure or social outings with peers over family time.

2.What are the differences in food for different occasions?

The choice of food is highly symbolic and varies greatly depending on the occasion.

Daily Meals: These are typically focused on convenience, nutrition, and cost-effectiveness. They are often simple, home-cooked dishes that can be prepared quickly after a long day.

Festivals and Celebrations: Food on these occasions is all about symbolism, abundance, and tradition. For example, during Chinese New Year, dishes like fish (symbolizing surplus) and dumplings (resembling ancient gold ingots) are essential. The food is richer, more elaborate, and meant for sharing among a large group.

Formal Business Dinners: The food served here is chosen to project an image of sophistication and professionalism. The setting is often a high-end restaurant, with a focus on fine dining etiquette and cuisine that impresses, facilitating business relationships.

3.Do people need food when they are talking about big things?

While not a strict necessity, sharing food during important discussions is incredibly beneficial and a near-universal social practice. Food and drink act as a social lubricant. They create a more relaxed and congenial atmosphere, which can ease tensions and make difficult conversations feel less confrontational. The shared act of eating builds a sense of common ground and trust. This is why "breaking bread together" is such a powerful concept across cultures—it transforms a mere negotiation into a more human, collaborative exchange. So, while you can discuss big things in an empty room, the presence of food often mediates the interaction, making it more productive and positive.

7.再去的旅行

A trip you would like to make again

You should say:

Where and when you went

Who you made the trip with

What you did during the trip

And explain why you would like to make a trip again

The trip I would love to revisit without any hesitation is my journey to Kyoto, Japan, which I took with my family in the autumn of 2019, just before the global pandemic.

I made this trip with my parents and my younger sister. It was a particularly special vacation because it was one of the rare occasions after we had all started our own careers and studies, making it difficult to coordinate schedules for a prolonged family trip.

During our five-day stay, we immersed ourselves in the city's profound cultural heritage. We explored countless ancient temples and shrines, such as the golden Kinkaku-ji and the serene Fushimi Inari Shrine with its iconic thousands of vermilion torii gates. We were fortunate to catch the tail end of the autumn foliage, and the sight of historic structures set

专业雅思教学，最全课前课后辅导，100 留学，全心为你

against fiery red and vibrant yellow maple trees was breathtaking. We also participated in a traditional tea ceremony, which was a lesson in mindfulness and precision. Of course, we indulged in the local cuisine, from delicate kaiseki meals to warm bowls of ramen from a small alleyway shop.

The reason I'm so eager to go back is twofold. Firstly, the trip felt somewhat rushed. Kyoto has a depth that cannot be fully appreciated in just a few days. I would love to return at a slower pace, perhaps even staying in a ryokan (a traditional inn), to truly soak in the atmosphere without a strict itinerary. I'd spend hours in a single garden, just contemplating.

Secondly, and more importantly, I want to recapture and deepen the feeling I had there. Kyoto offered a unique blend of aesthetic beauty and spiritual tranquility that I've rarely experienced elsewhere. It was a trip that not only brought my family closer together but also provided me with a profound sense of peace and inspiration. Returning now, with a more mature perspective, I believe I would appreciate its subtleties even more and create new, more mindful memories, almost like having a conversation with the city a second time.

Part3

1.Why do people like travelling?

People travel for a multitude of reasons, but they often revolve around a few core desires. Firstly, it's a powerful form of escape and relaxation. People seek to break away from their daily routines, work pressures, and familiar environments to recharge both mentally and physically. Secondly, it's driven by curiosity and the thirst for learning. Travel is the most immersive way to experience different cultures, histories, cuisines, and ways of life firsthand, thereby broadening one's horizons. Finally, for many, it's about building connections—strengthening bonds with travel companions and creating shared memories that last a lifetime.

2.What should we prepare before a trip?

Thorough preparation is key to a smooth and enjoyable trip. The essentials can be categorized as follows:

Documentation and Logistics: This includes booking flights and accommodation in advance, ensuring your passport and

visas are valid, and arranging travel insurance—a crucial but often overlooked item.

Financial Preparation: Informing your bank of your travel plans to avoid your cards being frozen, and having a mix of cash and cards in the local currency.

Research and Planning: Researching the local culture, customs, and weather to pack appropriate clothing. It's also wise to look up key phrases in the local language and have a rough itinerary or a list of "must-see" spots, while remaining flexible.

Health and Safety: Packing a small personal first-aid kit with essential medicines and ensuring you have any necessary vaccinations.

3.What would happen if no preparation were made before the trip?

A lack of preparation can turn a dream vacation into a logistical nightmare. The consequences range from minor inconveniences to serious troubles. You could face issues like financial problems (cards being blocked, no local cash), accommodation woes (finding all hotels fully booked),

专业雅思教学，最全课前课后辅导，100 留学，全心为你

or logistical standstills (missing a vital visa). On a day-to-day level, it leads to wasted time, higher costs from last-minute bookings, and constant stress from not knowing what to do or how to get around. In worst-case scenarios, like a medical emergency without insurance, it could lead to severe financial and personal risk.

4.Why do some people prefer to travel in their own country rather than going abroad?

This preference is rooted in several practical and emotional reasons. Firstly, convenience and cost-effectiveness are major factors. Domestic travel eliminates the need for visas, long-haul flights, and the hassle of dealing with significant language barriers and currency exchange. It's often much more affordable.

Secondly, there's a sense of familiarity and comfort. Traveling within one's own country reduces culture shock and the potential for misunderstandings. People may also have a strong desire to deepen their connection to their own heritage. They might feel that there is so much richness and diversity within their own nation's history and landscapes that they haven't fully explored yet, fostering a sense of national pride and personal identity.

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

8.传统故事

An interesting traditional story that you've read

You should say:

What it is about

When you read it

How you feel about it

and explain why do you think it is interesting

An incredibly poignant traditional story from China that has always stayed with me is the legend of "The Butterfly Lovers," often referred to as the Chinese equivalent of Romeo and Juliet.

I first encountered this story as a child, probably when I was around eight or nine years old. My grandmother narrated it to me one summer evening. Later, I read the detailed version in a collection of Chinese folk tales.

The story is about a young woman named Zhu Yingtai, who disguises herself as a man to pursue an education, as women were barred from schools in ancient times. During her travels to the academy, she meets a fellow scholar, Liang Shanbo. They become sworn brothers and develop a deep bond over three years of study. Zhu falls in love with Liang, but he remains unaware of her true gender. When she is forced to return home, she indirectly reveals her identity and feelings to Liang, but he fails to grasp the hints. By the time he realizes the truth and visits her, her father has already arranged for her to marry another man. Heartbroken, Liang dies of grief. On her wedding day, Zhu passes by Liang's grave, which miraculously splits open. She throws herself into the grave, and they are transformed into a pair of beautiful butterflies, finally united for eternity.

I feel profoundly moved by this story every time I recall it. It's a mixture of sadness for their tragic fate and awe for the power of their love. The image of the two butterflies is hauntingly beautiful and provides a sense of poetic justice and hope.

I find this story interesting for several reasons. Firstly, it's a powerful critique of feudal society, highlighting the lack of freedom for women and the injustice of arranged marriages. Secondly, it celebrates intellectual companionship as the foundation of love, which was quite progressive for its time. Finally, the magical realism of the ending elevates it from a simple tragedy to a timeless allegory about love transcending even death. The butterflies symbolize both freedom and eternal union, making the story not just sad, but ultimately uplifting and deeply resonant across generations.

Part3

1.Why children listen to bedtime stories?

Bedtime stories serve multiple crucial purposes for children. Beyond simply helping them fall asleep, they are a fundamental tool for cognitive and linguistic development. They introduce new vocabulary, sentence structures, and narrative concepts. Furthermore, this ritual is a profound emotional bonding experience between parent and child, providing a sense of security, comfort, and love. The stories themselves often contain simple moral lessons, helping children navigate their emotions and understand the

difference between right and wrong in a safe, imaginative context.

2.Is a good story important for a movie?

Absolutely, a compelling story is the backbone of a great movie. While spectacular visual effects, famous actors, and a powerful soundtrack can enhance the experience, it is the story that ultimately engages the audience's heart and mind. A strong narrative with well-developed characters gives the audience something to invest in emotionally. It's the plot that creates suspense, evokes empathy, and gives meaning to the visual spectacle. A movie with stunning visuals but a weak, incoherent story will ultimately feel hollow and forgettable.

3.What types of books do children enjoy reading?

Children's reading preferences evolve as they grow, but they generally gravitate towards books that spark their imagination and curiosity. Younger children adore brightly illustrated picture books, simple fairy tales, and rhyming stories. Early readers often enjoy series with relatable characters, funny situations, and fantastical elements, like magic or talking animals. As they enter the pre-teen and teenage years, their tastes diversify into genres like adventure, mystery, science fiction, and realistic stories

about friendship and school life. The key element across all ages is a strong, engaging narrative that connects with their interests and experiences.

4.What are some Chinese stories based on true events?

Chinese history provides a rich tapestry for stories based on true events, though they are often romanticized. A prominent example is the story of Yue Fei, a general from the Southern Song Dynasty who is a national symbol of loyalty and patriotism. His mother tattooed the characters for "serve the country with the utmost loyalty" on his back, and he fought tirelessly against invaders before being wrongly executed. Another famous story is that of Zheng He, the Ming Dynasty admiral who led massive treasure fleets on epic voyages across the Indian Ocean, showcasing China's naval power and diplomatic reach. These stories blend historical figures with legendary elements to convey moral and patriotic values.

5.Is it beneficial for parents to tell bedtime stories for their children's development?

Yes, the benefits are immense and multifaceted. Academically, it boosts language skills, literacy, and concentration. Psychologically, it strengthens the

parent-child bond and provides a secure, comforting routine that helps children feel safe. Cognitively, it stimulates imagination and creativity, as children visualize the scenes and characters. Moreover, it helps children process emotions and complex situations through the safe distance of a narrative. This simple, traditional practice is one of the most powerful and positive activities for a child's holistic development.

9.突然停电的经历

A time when the electricity suddenly went off

You should say:

When/where it happened

How long it lasted

What you did during that time

And explain how you felt about it

专业雅思教学，最全课前课后辅导，100 留学，全心为你

I'd like to talk about a rather memorable power outage that happened in my apartment last summer. It was a sweltering July evening, and I was at home, right in the middle of preparing for a crucial online exam.

The outage occurred around 8 PM. One moment, I was staring at my computer screen, and the next, the entire apartment was plunged into complete darkness and an eerie silence, broken only by the sudden absence of the air conditioner's hum.

The blackout lasted for about three hours, which felt like an eternity at the time. With my computer dead and my study plans disrupted, I initially panicked. But after a few minutes, I fumbled around and found some candles, which cast a soft, flickering light around the living room. Since I couldn't study, I decided to make the best of the situation. I sat with my family, and we started talking—not the usual quick exchanges, but a real, uninterrupted conversation. We shared stories and laughed about things we hadn't discussed in a long time. The oppressive heat forced us to open all the windows, and for the first time that evening, we could actually hear the sounds of the city and feel a gentle breeze.

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

My feelings about this experience were surprisingly mixed. Initially, I felt intense frustration and anxiety about my disrupted study schedule. However, as the evening progressed, that feeling transformed into something else. I felt a sense of peace and unexpected connection. The power cut forced us to slow down and be present with each other. It was a stark reminder of how dependent we are on technology and how it often isolates us even when we're together. In a strange way, I was almost grateful for that blackout. It felt like a forced "digital detox" that brought my family closer and provided a much-needed mental break from the constant pressure of screens and tasks.

Part3

1.Which is better, electric bicycles or ordinary bicycles?

This depends heavily on the user's needs. Ordinary bicycles are superior for pure exercise, as they provide a full-body workout. They are also lighter, simpler to maintain, and don't rely on charging, making them more reliable for short, frequent trips.

On the other hand, electric bicycles are fantastic for practicality and accessibility. They make cycling feasible for longer commutes, hilly areas, and for people who might not have the physical stamina for a traditional bike. They can encourage more people to choose cycling over driving, which is better for the environment. So, for fitness purists, the ordinary bike is better, but for commuters seeking an efficient and sweat-free green alternative, the e-bike is the clear winner.

2.Do you think electric bicycles will replace ordinary bicycles in the future?

I believe they will become much more prevalent, but I doubt they will completely replace ordinary bicycles. We will likely see a coexistence of both. E-bikes will probably dominate the market for daily commuting and utility cycling, as they lower the barrier to entry and make cycling a viable option for a much wider population.

However, traditional bicycles will always have their place. They will remain the preferred choice for sports enthusiasts, fitness cyclists, and purists who enjoy the simplicity and the

direct physical connection to the road. Furthermore, their lower cost and maintenance will keep them relevant for casual riders and in developing regions. The market will likely just become more segmented.

3.Which is better, electric cars or petrol cars?

This is the debate of our era, and each has its merits. Electric cars (EVs) are undoubtedly better for the environment at the local level, producing zero tailpipe emissions, which improves urban air quality. They are also quieter, cheaper to "fuel" with electricity, and offer smoother acceleration.

However, petrol cars currently have advantages in terms of infrastructure and range. The network of petrol stations is ubiquitous, and refueling takes only minutes, whereas charging an EV, despite improving technology, still takes significantly longer. For long-distance travel in areas with sparse charging infrastructure, petrol cars are still more practical.

Overall, the future points towards electric vehicles as battery technology advances and charging infrastructure expands.

But currently, the "better" choice depends on the driver's specific needs, travel patterns, and access to charging.

4.How did people manage to live without electricity in the ancient world?

People in the ancient world lived in sync with natural rhythms and developed ingenious solutions. Their daily life was dictated by the sunrise and sunset. For light, they used fire, candles, and oil lamps. For food preservation, they relied on methods like salting, smoking, drying, and fermentation, or used cool cellars and ice harvested in winter.

Socially and for entertainment, life was intensely communal. Instead of individual screens, people gathered to tell stories, play music, and engage in community festivals. Knowledge was passed down orally or through handwritten manuscripts. While their lives were undoubtedly harder in terms of physical labor and lacked the conveniences we have, they fostered a deep connection to the natural world and their immediate community, which is something modern society has largely lost. Their existence was a testament to human adaptability and resilience.

10.第一次尝试并感到兴奋的新活动

A new activity that you tried for the first time and felt excited about

You should say:

What it was

When you tried

Who you did with

And explain why did you feel excited

A new activity that I tried for the first time recently and found incredibly exciting was pottery making, specifically throwing a pot on a wheel.

I tried it just a couple of months ago. A friend of mine, who is an art enthusiast, had been raving about a local pottery studio, and she finally convinced me to book a beginner's workshop with her for a weekend.

So, I went to the studio with this close friend. The atmosphere was calm and creative, filled with the earthy

smell of clay. Our instructor was very patient, first showing us the basics of wedging the clay to remove air bubbles. Then came the main event: sitting down at the electric pottery wheel.

The feeling was a mix of excitement and slight nervousness. Placing the cool, wet lump of clay in the center of the spinning wheel and then using my hands to shape it was a completely novel tactile experience. It was much harder than it looked! My first few attempts were wobbly and collapsed, but the instructor guided my hands, and suddenly, I could feel the clay centering and rising under my fingertips.

The excitement came from several sources. Firstly, it was the sheer joy of creation. There was something almost magical about transforming a formless lump of earth into a symmetrical, tangible object with my own hands. Secondly, it was incredibly meditative. The focus required to control the spinning clay forced me to be completely present in the moment, shutting out all other thoughts—a form of mindfulness I hadn't experienced before. Finally, there was a profound sense of accomplishment when I finally created a simple, albeit imperfect, little bowl. Holding that finished,

albeit wobbly, piece that I had made from scratch was immensely satisfying. It wasn't just about the final product, but the thrilling and calming process of making it.

Part3

1.What common activities could make people relax?

People have diverse ways to unwind, but common relaxing activities often fall into a few categories. Physical activities like yoga, going for a walk in nature, or even light jogging can help release endorphins and relieve physical tension. Creative and mindful hobbies are also very popular, such as listening to music, reading a book, drawing, or even the pottery I just mentioned. These activities absorb one's attention and provide a mental escape. Lastly, simple social or passive activities like having a heart-to-heart conversation with a friend, watching a movie, or just taking a long, warm bath are classic ways for people to de-stress and recharge.

2.Why do some people like extreme sports?

The allure of extreme sports is complex and goes beyond a simple thrill. Psychologically, they provide an intense adrenaline rush and a powerful sense of being fully alive and present, which can be addictive. For many participants, it's

also about mastering fear and pushing personal boundaries. The immense sense of accomplishment and self-confidence gained from conquering a formidable physical challenge is profoundly rewarding. Furthermore, it often comes with a strong sense of community among participants who share this unique passion. In a world that can sometimes feel too safe and predictable, extreme sports offer a controlled environment to experience raw, primal emotions and test one's limits.

3.Are extreme sports good or bad?

It's impossible to label them as universally good or bad; it's a matter of perspective and practice. On the positive side, they can build incredible mental resilience, discipline, and physical fitness. They foster a deep focus and can be incredibly empowering.

However, the obvious downside is the high level of risk involved. A single mistake can lead to severe injury or even death. This inherent danger can cause significant stress for the participants' families.

Therefore, I believe the value of an extreme sport hinges on proper preparation, training, and respect for the activity. When pursued with the right safety equipment, professional

guidance, and a rational understanding of one's own abilities, the benefits can be immense. But when approached recklessly, the consequences can be tragic. So, they are neither good nor bad in themselves; their value is determined by the participant's attitude and approach.

11.在家族企业工作的人

A people you know who work in a family business (such as store/restaurant)

You should say:

Who he/she is

What the business is

What products it sells

And explain what you have learned from him/her

I'd like to talk about my cousin, Lisa, who works in her family's traditional Chinese bakery. It's a well-established business that has been serving our local community for over three decades.

The business is a bakery that specializes in traditional Chinese pastries and breads. It's not a fancy, Western-style patisserie, but a place that evokes a strong sense of nostalgia. They sell a variety of products, from classic mooncakes during the Mid-Autumn Festival to everyday items like fluffy baozi (steamed buns) with various fillings, sweet wife cakes, and crispy egg tarts. The aroma that wafts out of that shop is absolutely irresistible.

Lisa didn't initially plan to join the business. She studied marketing at university but decided to return home after graduation to help her aging parents. I've learned several invaluable things from her. First and foremost, I've learned about the immense weight of legacy and responsibility. She often speaks about the pressure of maintaining her family's reputation and the recipes that have been passed down through generations. It's not just a job; it's about upholding a piece of our local culture.

Secondly, I've gained a new appreciation for the blend of tradition and innovation. While Lisa respects the traditional methods, she has used her marketing knowledge to help the business grow. She set up social media accounts to attract

younger customers and even introduced subtle, modern twists to some classic recipes to appeal to changing tastes. From her, I've seen that a family business isn't about being stagnant; it's about adapting while staying true to your core identity. Her dedication has taught me that success is deeply rooted in passion, resilience, and a profound sense of duty to both your family and your community.

Part3

1.Would you like to start a family business?

That's a thought-provoking question. I see it as a double-edged sword. On one hand, the idea is very appealing. Building something with your loved ones, sharing a common vision, and creating a legacy that can be passed down is a beautiful concept. The inherent trust and shared values could make the work environment very supportive.

On the other hand, I would be cautious. Mixing family dynamics with professional decisions can be very challenging. Disagreements over strategy or finances could strain personal relationships. There's also the pressure of expectations and

the potential lack of clear boundaries between work and personal life.

So, while I'm open to the idea, I think it would require a very clear agreement from the start about roles, responsibilities, and how to handle conflicts, ensuring that the business strengthens, rather than jeopardizes, our family bonds.

2. What are the advantages and disadvantages of family businesses?

Advantages:

Trust and Commitment: Family members often share a deep, intrinsic trust and a long-term commitment to the business's success, which can lead to greater stability.

Shared Values and Culture: They usually operate with a strong, unified culture and a clear sense of purpose, which can be a competitive advantage.

Flexibility and Long-term Vision: They can make quick decisions and are often less focused on short-term quarterly profits, allowing them to invest in long-term growth.

Disadvantages:

Succession Issues: Deciding who will take over the business can lead to conflict and rivalry among family members.

Nepotism vs. Meritocracy: There might be a tendency to hire or promote family members over more qualified external candidates, which can hinder innovation and growth.

Blurred Boundaries: Family conflicts can spill over into the workplace, and business disagreements can ruin family gatherings, making it hard to separate professional and personal lives.

3.Why do young people start their own business?

Young people are driven to entrepreneurship for a variety of reasons. A primary motivator is the desire for autonomy and freedom—the chance to be their own boss, make their own decisions, and control their own destiny. Secondly, it's often fueled by passion and innovation. Many see a gap in the market or have a unique idea they are deeply passionate about and want to bring it to life. Furthermore, in a competitive job market, starting a business can be seen as a way to create their own opportunities and achieve financial success on their own terms, rather than climbing a corporate

ladder. The digital age has also significantly lowered the barriers to entry for starting many types of businesses.

4.What qualities do people need when staring their own business?

To succeed in entrepreneurship, a combination of hard and soft skills is essential.

Resilience and Perseverance: The path is filled with setbacks and failures. The ability to learn from mistakes and keep going is paramount.

Passion and Vision: You need a deep belief in your idea to sustain the motivation through tough times and to inspire others to join you.

Adaptability: The market is constantly changing. A successful entrepreneur must be willing to pivot, learn new skills, and adapt their strategy.

Financial Literacy: Understanding cash flow, budgeting, and basic finance is crucial for survival.

Strong Work Ethic: Running your own business often requires working longer and harder than you would in a salaried job, especially in the beginning.

12.迷路的经历

An occasion when you lost your way

You should say:

Where you were

What happened

How you felt

And explain how you found your way

I'd like to share an experience of getting lost that happened to me a few years ago while I was traveling solo in Kyoto, Japan. It was both nerve-wracking and, in hindsight, a rather memorable adventure.

I was exploring the historic Higashiyama district, an area famous for its narrow, winding stone-paved lanes, traditional wooden buildings, and countless small shrines. I was following a digital map on my phone, completely absorbed in the atmosphere, when my phone battery suddenly died. I had been so dependent on it that I hadn't paid much attention to physical landmarks or taken a paper map.

At first, I felt a surge of panic. The streets all looked eerily similar, and without the familiar blue dot on my screen, I felt completely disoriented. The initial confidence I had evaporated, replaced by a growing sense of anxiety. I was alone in a foreign country, couldn't speak much Japanese, and every turn I took seemed to lead me deeper into a maze of identical-looking alleys. I felt foolish for my over-reliance on technology and started worrying about missing my scheduled train back to my hotel.

After about ten minutes of aimless walking, which felt like an hour, I decided to calm down and employ a more traditional approach. First, I tried to retrace my steps to a main road, but that proved difficult. So, I mustered up my courage and approached a friendly-looking elderly shopkeeper who was standing outside his small souvenir shop. Using a combination of very basic Japanese phrases, the name of my hotel written on a card, and a lot of gesturing, I managed to ask for directions. He was incredibly kind. He didn't just point; he actually drew a simple but clear map for me on a piece of paper.

Following his hand-drawn map, I found my way back to a main thoroughfare within minutes. The feeling of relief was immense. That experience taught me a valuable lesson about the importance of situational awareness and the kindness of strangers. What started as a stressful situation turned into a heartwarming interaction that I now remember more vividly than many of the temples I visited that day.

Part3

1.Why do some people get lost more easily than others?

This difference can be attributed to a combination of innate ability and habit. Some people naturally have a better "sense of direction" or spatial intelligence. They are better at creating mental maps and remembering visual landmarks. On the other hand, some people are more directionally challenged and may rely heavily on technology from the start, never developing those innate skills. Furthermore, personality plays a role; a more observant and detail-oriented person is likely to notice and remember landmarks, while someone who is often lost in thought might not pay enough attention to their surroundings.

2.Do you think it is important to be able to read a map?

Absolutely, I believe it remains a crucial fundamental skill, even in the age of GPS. Understanding a map fosters spatial awareness and problem-solving abilities. It gives you a big-picture understanding of an area, unlike turn-by-turn navigation which can be quite passive. In situations where technology fails—like a dead battery, no signal, or a malfunctioning app—the ability to read a physical map becomes not just important, but potentially essential for safety. It's a form of self-reliance that empowers you in unfamiliar environments.

3.Do you think it is important to do some?

Yes, without a doubt. While spontaneity can be fun, basic preparation significantly enhances both the safety and quality of a trip. It helps you make the most of your time by identifying key attractions and understanding local customs, which shows respect and helps avoid cultural faux pas. From a practical standpoint, it ensures you know about necessary documents like visas, local transportation options, and general safety advisories. Good preparation lays a foundation that actually allows for more relaxed and enjoyable spontaneous exploration within a secure framework.

4.How can people find their way when they are lost?

There are several strategies people can employ:

Stay Calm: The first and most important step is to avoid panic, as it clouds judgment.

Use Technology: If available, use a GPS map or a navigation app. It's often the quickest solution.

Retrace Steps: Try to mentally backtrack to the last familiar landmark.

Look for Landmarks: Identify prominent, unique features like a tall building, a major square, or a body of water to reorient yourself.

Ask for Help: Approach someone who looks local, such as a shopkeeper, a police officer, or a family. They often have the most reliable knowledge of the area.

Find an Information Center: In tourist areas, heading to a designated tourist information center is a safe and reliable option.

5.Is a paper map still necessary?

While not an everyday necessity for most, I believe paper maps still hold significant value. They are a failsafe backup when electronic devices fail. Moreover, they offer a macro-perspective that digital maps often lack, helping

travelers understand the geographic relationship between different areas. Some people also find that the physical act of reading a paper map helps them remember the layout of a place better. So, while we don't need to carry them all the time, having one, especially in remote areas or during important trips, is a simple and wise precaution.

6.How do people react when they get lost?

Reactions vary greatly depending on personality and circumstance. Anxious individuals might panic, leading to rushed and often poor decisions. They might feel frustrated, scared, or even angry. On the other hand, more resilient or adventurous people might see it as a challenge or an unexpected detour. They are more likely to stay calm, methodically work through the problem, and even embrace the experience as a chance to discover something they wouldn't have found otherwise. For many, the initial reaction is a mix of worry and frustration, which then evolves into a problem-solving mindset.

13.童年玩具

专业雅思教学，最全课前课后辅导，100 留学，全心为你

A toy that you loved in your childhood

You should say:

What the toy was

Who gave it to you

How often you played with it

And explain why it was so special to you

The toy that holds the most cherished place in my childhood memories is a basic set of LEGO bricks. It wasn't a fancy themed kit, just a classic box of colorful bricks of various sizes, windows, and wheels.

It was a birthday gift from my parents on my seventh birthday. I remember being slightly disappointed at first because some of my friends had received flashy electronic toys. However, that initial disappointment quickly vanished.

I played with that LEGO set almost every single day for years. It was my go-to activity after finishing homework and during long weekends. I would spread all the pieces on the floor of my room and lose track of time completely.

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

This toy was incredibly special to me for several reasons. Firstly, it was a powerful catalyst for my creativity and imagination. Unlike a pre-designed toy, LEGO was a blank canvas. I built everything I could dream of—spaceships to explore distant galaxies, sprawling castles with secret passages, and rugged cars for imaginary safari adventures. It taught me the fundamentals of problem-solving and spatial reasoning, as I had to figure out how to make my structures stable and how to translate my mental images into physical forms.

Secondly, it was a social toy. My best friend also had a LEGO set, and we would often combine our collections to create massive, elaborate cities together, learning to collaborate and share ideas.

Most importantly, it was special because of the sense of accomplishment and ownership it gave me. The joy of stepping back and looking at a complex creation that I had built from scratch with my own hands was immensely satisfying. It wasn't just a toy; it was a tool for creation and a source of endless possibilities. That humble box of bricks did

专业雅思教学，最全课前课后辅导，100 留学，全心为你

more for my development than any flashy, pre-programmed toy ever could.

Part3

1.Do boys and girls prefer different kinds of toys?

While there's a noticeable trend, I believe the lines are increasingly blurring. Traditionally and due to societal conditioning, boys are often encouraged towards toys that involve construction, action, and vehicles, like LEGO, action figures, and toy cars. Girls, on the other hand, are often steered towards toys centered on nurturing, beauty, and domesticity, like dolls, play kitchens, and makeup sets.

However, these preferences are not hardwired. They are largely shaped by marketing and parental influence. Nowadays, there's a positive shift, with more parents encouraging gender-neutral toys that foster a wider range of skills. Ultimately, a child's individual personality is a much stronger determinant of their toy preference than their gender.

2.How do toys that were popular in the past compare with toys that are popular now?

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

The difference is quite stark, primarily driven by technology. Toys in the past were generally simpler and more analog. They were often passive and relied heavily on a child's imagination to come to life, like dolls, wooden blocks, balls, and jump ropes. The focus was on physical activity, social interaction, and open-ended creativity.

Modern toys, however, are frequently digital, interactive, and screen-based. Think tablets, video games, and robotic toys that are often pre-programmed. While these can be educational and engaging, they can also be more isolating and leave less room for imaginative play. The shift is from active creation to more passive consumption of entertainment, though there is a growing counter-movement advocating for a return to simpler, traditional toys.

3.What should people consider when choosing a toy for a child?

Selecting a toy should be a thoughtful process. Key considerations include:

Age-appropriateness and Safety: The toy must be safe, with no small parts for young children who might choke, and made from non-toxic materials.

Educational Value: Does it stimulate creativity, problem-solving, or physical activity? Toys that encourage active engagement are preferable to those that merely require passive button-pushing.

The Child's Interests: The best toy is one that aligns with the child's current passions, whether it's dinosaurs, space, or art.

Durability and Longevity: A well-made toy that can withstand rough play and grow with the child offers better value.

Open-endedness: Toys with multiple uses (like blocks or modeling clay) that encourage imagination are often more beneficial than single-function toys.

4.Should kids be permitted to pick their own toys at a toy store?

I believe in a balanced approach. Allowing children to have a say is important as it fosters a sense of autonomy and helps them develop their own preferences and decision-making

skills. It also ensures they will be genuinely excited about and engaged with the toy.

However, giving them complete, unrestricted choice can be problematic. Children are highly susceptible to marketing and might be drawn to the most advertised, expensive, or age-inappropriate toy. Therefore, a good strategy is to offer them a guided choice. Parents can pre-select a few suitable, safe, and reasonably priced options that meet their criteria, and then let the child make the final decision from that curated selection. This balances the child's desire for independence with the parent's responsibility for safety and sensible spending.

14.优质服务

A time you receive a good service from a staff member in shop/company

You should say:

Where the shop/company is

When you receive the good service

What service you received

And explain how you felt about the service

I'd like to talk about an exceptional service experience I had at the Apple Store in my city about a year ago. It was a Saturday afternoon, and the store was, as expected, incredibly busy and bustling with customers.

The service I received was related to my MacBook, which had suddenly started having issues with its keyboard. Several keys had become unresponsive, which was a major problem for me as I needed it for my work. I was quite frustrated and anxious, expecting a long, complicated, and potentially expensive repair process.

Upon entering the store, I was greeted by a staff member named David. What set him apart immediately was his calm and empathetic demeanor amidst the chaos. He listened patiently as I explained the problem, without interrupting or rushing me. After a quick preliminary check, he explained the likely cause and the potential solutions clearly, outlining the costs and time required for each.

However, the service went from good to great with what happened next. David knew that I relied heavily on my laptop for work. Instead of just taking it in for repair, he proactively offered me a loaner device—a same-model MacBook—to use for the duration of the repair at no extra cost. This was a solution I hadn't even dared to hope for. He handled all the paperwork efficiently and kept me updated throughout the process.

I felt an immense sense of relief and gratitude. My initial anxiety completely melted away, replaced by a feeling of being genuinely cared for as a customer. David didn't just fix a machine; he solved my core problem, which was the potential disruption to my work and life. The experience felt personalized and proactive, not just transactional. It transformed a potentially stressful situation into a very positive one and cemented my loyalty to the brand. It showed me that truly good service is about empathy and providing solutions that address the customer's unspoken needs.

Part3

1.Do you think expensive services are necessarily good services?

Not at all. There is no direct correlation between high cost and high-quality service. An expensive service sets a higher expectation, but the quality is determined by the professionalism, attitude, and efficiency of the staff, not the price tag.

I've had mediocre experiences in luxury hotels where the service was cold and impersonal, and I've been blown away by the warmth and efficiency in a small, affordable family-run restaurant. Good service is about value—whether the experience justifies the cost. An expensive service that fails to meet expectations feels like a rip-off, while fantastic service at a reasonable price feels like a wonderful discovery.

2.Do you think good services are important?

Absolutely, they are paramount. From a business perspective, good service is a key competitive advantage. It fosters customer loyalty, generates positive word-of-mouth, and directly impacts a company's reputation and bottom line.

From a customer's perspective, good service transforms a routine transaction into a positive experience. It reduces stress, builds trust, and simply makes life more pleasant. On

a societal level, a culture of good service indicates professionalism and respect, making commercial interactions and public services more efficient and humane for everyone. It's a cornerstone of a well-functioning consumer society.

3.Which one is better, face to face service or online service?

This isn't a matter of one being universally better; they serve different purposes and have distinct strengths.

Face-to-face service is superior for complex, sensitive, or personalized issues. The human interaction allows for empathy, immediate clarification, reading of body language, and building trust. For example, consulting a financial advisor or resolving a complicated complaint is best done in person.

Online service excels in efficiency, convenience, and accessibility for routine tasks. Things like tracking a package, checking a bank balance, or making a standard booking can be done instantly, 24/7, without the need to travel or wait in line.

The ideal model is an omnichannel approach where customers can seamlessly switch between online and in-person service as their needs require.

4.What jobs require staff to get in touch with many people?

A vast number of professions require extensive people interaction. Some prominent examples include:

Healthcare Professionals: Doctors, nurses, and therapists are in constant contact with patients and their families.

Education: Teachers and university lecturers interact with students, parents, and colleagues daily.

Sales and Retail: Salespeople, cashiers, and account managers are on the frontline of customer interaction.

Hospitality Industry: Hotel receptionists, tour guides, and flight attendants are defined by their contact with people.

Customer Service Representatives: Their entire role is based on communicating with customers to solve problems.

Human Resources: HR professionals are involved in recruiting, training, and supporting employees within a company.

Essentially, any job that is not performed in isolation requires strong interpersonal skills and involves being in touch with many people.

15.道歉的经历

An experience that someone apologized to you

You should say:

When he/she apologized

What he/she had done to you

Why he/she apologized to you

And explain how you felt about it

I'd like to share an experience where my best friend, Leo, apologized to me. It happened about two years ago, during a particularly stressful period for both of us as we were preparing for our final university exams.

What he had done was, he had completely forgotten about my birthday. This might sound trivial, but for us, it was a big deal. We had a long-standing tradition of celebrating each other's birthdays, even if it was just with a simple meal or a small gift. That year, on my birthday, I waited all day for a message or a call from him, but nothing came. I saw him posting on social media about his study group, and I felt deeply hurt and ignored, thinking he simply couldn't be bothered.

The next day, he called me, and his voice was full of remorse. He apologized profusely. The reason he apologized was that he realized his negligence had hurt our friendship. He explained that he had been so overwhelmed and sleep-deprived from studying that the date had completely slipped his mind. He wasn't making an excuse; he was genuinely acknowledging his mistake and taking full responsibility for making me feel unimportant.

My feelings about this apology were very positive. Initially, I had felt upset and neglected, but his apology completely changed my perspective. Firstly, I felt validated. His acknowledgment of my hurt feelings made me feel that my

emotions were understood and respected. Secondly, I felt his sincerity. It wasn't a casual "sorry"; he clearly articulated what he had done wrong and why it was wrong. Most importantly, I felt a renewed sense of trust and closeness. The fact that he valued our friendship enough to offer such a heartfelt apology, and the fact that I was able to forgive him wholeheartedly, actually strengthened our bond. It transformed a negative incident into a powerful reminder of how much we cared for each other. We ended up having a belated celebration that weekend, and it became one of our most memorable catch-ups.

Part3

1.Why do some people not like to apologize?

There are several psychological and social barriers that prevent people from apologizing. A primary reason is pride and ego. Apologizing requires humility and an admission of fault, which can be perceived as a blow to one's self-image. Some people equate saying "I'm sorry" with losing or showing weakness.

Another reason is shame and defensiveness. The person might feel so bad about what they've done that confronting it is too painful, so they become defensive and shift the blame to avoid those uncomfortable feelings. In some cases, people may simply lack the emotional intelligence to recognize the impact of their actions on others, or they may come from a cultural or familial background where apologizing is not a common practice.

2.Do people in your country like to apologize?

In my country, the approach to apologizing is quite nuanced and context-dependent. In formal and public situations, people are generally quick to offer polite apologies for minor inconveniences, like bumping into someone. This is seen as good manners.

However, when it comes to deeper, more personal conflicts, especially within families or between close friends, people can be more reluctant. There's often a strong emphasis on "saving face" and maintaining harmony by avoiding direct confrontation, which sometimes means sweeping issues under the rug rather than addressing them with a formal

apology. That said, I believe there's a generational shift happening, with younger people becoming more open to communicating their feelings and offering sincere apologies to mend relationships.

3.Are words more important than deeds?

This is a classic debate, and I believe they are interdependent and both crucial. Words without action are hollow and untrustworthy. For example, someone can apologize repeatedly but never change their behavior, making their words meaningless.

Conversely, actions without any explanatory or reconciliatory words can be confusing and lack emotional connection. A deed might show remorse, but without the verbal acknowledgment of fault, the injured party may not feel truly seen or understood.

The most powerful combination is when sincere words are followed by consistent, corrective actions. The words validate the feelings and state the intention, while the deeds prove the commitment and solidify the trust. One cannot replace the other in building genuine, lasting relationships.

4.Are there people who apologize and acknowledge responsibility for their faults?

Yes, absolutely, and these individuals are often highly emotionally mature and self-aware. Acknowledging fault is a sign of strength of character, not weakness. It demonstrates integrity, honesty, and a deep respect for the relationship that was damaged.

We see this in all aspects of life—from a friend who owns up to spreading a rumor, to a public figure who takes responsibility for a failed policy. These people understand that while making a mistake is human, taking responsibility is a choice that defines one's character. Their apologies are powerful because they are specific, they don't make excuses, and they focus on the impact of their actions on the other person, which is the true essence of a meaningful apology.

16.第一次和外国人对话

专业雅思教学，最全课前课后辅导，100 留学，全心为你

The first time you had a conversation with a foreigner in a foreign language

You should say:

Who the foreigner was

Where and when it happened

What you talked about

And explain how you felt during and after the conversation

The first meaningful conversation I had with a foreigner in English was with a tourist from Canada named Mark. It's a memory that's still very vivid for me.

This happened about five years ago, during the summer after my first year of university. I was visiting the Summer Palace in Beijing, which is always teeming with tourists from all over the world. I was sitting on a bench, admiring the view of Kunming Lake, when this man, Mark, approached me. He looked a bit lost and held out his map, pointing to a location and asking me for directions in broken Chinese.

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

Realizing he was a foreigner, I saw it as a perfect opportunity to practice my English. I switched to English and told him I could help. He was visibly relieved. We started with simple directions—I explained how to get to the Marble Boat. But the conversation didn't stop there. He was very friendly and asked me if I was a local and what I would recommend seeing in Beijing. I told him about my favorite spots, like the hutongs, and he shared that it was his first time in China and he was amazed by the scale and history of everything. We talked for about ten minutes about travel, our respective countries, and our impressions of Chinese culture.

During the conversation, my feelings were a real rollercoaster. Initially, I felt a surge of nervousness and self-doubt. My heart was pounding, and I was desperately searching for the right words in my head, worried about making grammatical mistakes or not being understood. There were a few awkward pauses where I had to gesture to get my point across.

However, as we continued talking and I saw that he understood me, my confidence grew. Mark was very patient and encouraging, which put me at ease. After the conversation, I felt an overwhelming sense

of accomplishment and excitement. It was a "Eureka!" moment—all the years of studying English from textbooks had finally come to life. I realized that the ultimate goal of language is communication, not perfection. The fact that I could successfully help someone and have a genuine cultural exchange using English was incredibly empowering. It fueled my motivation to keep learning and practicing, and it completely changed my perspective on language learning.

Part3

1.Do you think it's difficult to learn English?

I believe it's a language with both challenges and advantages, so it's moderately difficult. The advantages are that its grammar is relatively simpler than many other languages (e.g., no complex gender or case systems for nouns), and its resources are ubiquitous—movies, music, the internet—providing an immersive environment.

The difficulties, however, are significant. The pronunciation and spelling can be notoriously inconsistent, which is very confusing for learners. The vast vocabulary, with its many synonyms and phrasal verbs, also presents a steep learning

curve. Furthermore, mastering the subtle nuances of idioms and natural collocations requires long-term exposure. So, while getting to a basic conversational level is achievable, achieving true fluency is a challenging but rewarding journey.

2.Why do people learn foreign languages?

People learn foreign languages for a multitude of reasons, which can be broadly categorized into practical and personal motives.

Practical Reasons: The most common drivers are career and education. Proficiency in a language like English can open doors to better job opportunities, promotions, and studying at prestigious international universities. Travel and migration are also key reasons, as knowing the local language makes navigation and integration much smoother.

Personal Reasons: Many people are motivated by a love for the culture associated with the language, such as its literature, music, and films. They want to access these cultural products in their original form. It's also about cognitive benefits and personal growth—challenging the brain, gaining new perspectives, and the sheer

satisfaction of being able to connect with people from a different part of the world.

3.At what age do you think is the best time for people to learn a foreign)language?

This is a classic debate. From a neurological perspective, early childhood (before puberty) is arguably the best time. Children are like sponges; they can acquire native-like pronunciation and intuitive grammar with minimal effort through immersion and play.

However, I firmly believe it's never too late to learn. While adults might struggle more with accent, they possess significant advantages. They have better metacognitive skills—they can understand complex grammatical rules, have superior concentration, and are often more motivated and disciplined. A motivated adult can achieve incredible fluency. Therefore, while childhood might be the "optimal" period for natural acquisition, the "best" time is truly whenever one has the strong motivation and dedication to start. The key is consistent practice, not age.

4.What methods should teachers use to make language learning more interesting?

To make language learning more engaging, teachers should move beyond rote memorization and adopt a more interactive and practical approach.

Firstly, they should incorporate communicative and task-based activities. Instead of just drilling grammar, teachers can design role-plays, simulations, and debates on topics that students care about. For example, having students role-play ordering food in a restaurant or planning a trip forces them to use the language purposefully and creatively, which is far more stimulating.

Secondly, leveraging authentic and multimedia materials is key. Using short movie clips, popular songs, podcasts, or even segments from social media platforms like YouTube or TikTok can make lessons feel relevant and fresh. These materials expose learners to the language as it's actually used by native speakers, including slang and cultural nuances, which textbooks often lack.

Finally, embracing gamification and technology can significantly boost motivation. Language learning apps, online quizzes with leaderboards, and interactive games in the classroom introduce an element of fun and friendly competition. This transforms learning from a chore into a challenge, encouraging consistent participation and making the process of acquiring vocabulary and grammar structures much more enjoyable. The ultimate goal is to create a dynamic environment where students are so absorbed in the activity that they almost forget they're "studying."

17.一件家里的旧东西

An old thing that has been in your family for a long time

You should say;

What it is

What it looks like

How long it has been in your family

And explain why your family has kept it for so long

The old object I'd like to talk about is a manual sewing machine, a Singer model, which has been a cherished part of my family for over half a century.

It's a beautiful, heavy piece of machinery made of black cast iron, with intricate gold filigree patterns painted on its body. It has a large, gracefully turned handwheel on the side and a small, worn-out wooden drawer for storing threads, needles, and thimbles. The black paint is slightly faded in some areas, revealing the metal beneath, and the wooden platform bears countless tiny scratches, each telling a story of a garment made or mended.

This sewing machine belonged to my paternal grandmother. It was her most prized possession, a wedding gift from her parents around the late 1960s. So, it has been in our family for more than fifty years.

My family has kept it for so long, not for its functional value—as we now have a modern electric one—but for the profound emotional and symbolic weight it carries. It is a tangible link to my grandmother, whom I loved dearly. I have vivid childhood memories of sitting beside her, mesmerized

by the rhythmic whirring sound of the wheel and the needle dancing up and down as she skillfully stitched clothes for the entire family.

This machine symbolizes her resilience, creativity, and love. In a time of relative scarcity, she used it not just to make new clothes, but to mend torn ones, to make quilts from fabric scraps, and to ensure her family was always well-presented. It represents her hard work and the care she poured into our lives. Now, it sits in a corner of our living room, almost like a piece of art and a family relic. Keeping it is our way of honoring her memory and preserving a crucial part of our family's history and identity. It serves as a constant reminder of where we came from and the values of resourcefulness and dedication that she embodied.

Part3

1.What kinds of old things do people keep?

People tend to keep old items that hold significant personal, historical, or aesthetic value. Common categories include:

Jewelry and Accessories: Items like wedding rings, heirloom watches, or jade bracelets passed down through generations.

Furniture and Decorative Arts: Old wooden cabinets, vases, or calligraphy scrolls that carry family history or cultural value.

Photographs and Letters: These are perhaps the most common, as they are direct records of personal memories and relationships.

Books and Diaries: Old editions of books or personal journals that offer a glimpse into the past.

Tools and Utensils: Like the sewing machine I mentioned, which represent the livelihood or daily life of ancestors.

2.Why do people keep old things?

The reasons are deeply rooted in human psychology and sociology.

Emotional Connection and Nostalgia: Objects serve as powerful triggers for memories, connecting people to loved ones and happier times.

Family Heritage and Identity: Heirlooms help maintain a sense of continuity and belonging, telling a family's story across generations.

Historical and Cultural Value: Some items are kept as a record of a bygone era, preserving customs, craftsmanship, and social history.

Aesthetic Appreciation: Many old items, like antique furniture, are simply beautiful and are valued for their craftsmanship and timeless design.

3.Do young people like old things?

It's a mixed bag, but there's a growing appreciation. Some young people might perceive old things as outdated or irrelevant to their fast-paced, digital lives. However, a significant and growing number of young adults are developing a taste for vintage and retro items. They see value in the uniqueness, sustainability, and story behind an old piece, whether it's vintage clothing, classic vinyl records, or antique furniture. This trend is often driven by a desire for individuality and a connection to a perceived "more authentic" past, contrasting with mass-produced modern goods.

4.What are differences of keeping things between young people and old people?

There's a noticeable generational contrast in both what they keep and why.

Older People: They often keep things for practicality and deep sentimental attachment rooted in personal experience. They lived through times of scarcity, so they hold onto items "just in case" they might be needed. Their keepsakes are directly tied to their own life stories.

Younger People: Their "keeping" habits are more curated and digital. They are more likely to keep items for aesthetic reasons (vintage fashion) or as a hobby (collecting sneakers). Furthermore, they increasingly "keep" memories in digital forms—cloud photos, social media posts, and digital archives—rather than physical objects. Their attachment can be more selective and trend-influenced.

5.Why do people go to visit museums?

People visit museums for a multitude of reasons that go beyond mere sightseeing.

Education and Learning: Museums offer an immersive way to learn about history, art, science, and culture in a more engaging way than reading a book.

Aesthetic and Intellectual Stimulation: People go to appreciate great works of art, marvel at scientific discoveries, and be inspired by human creativity and ingenuity.

Cultural and Historical Connection: Museums provide a tangible connection to the past, helping people understand their own heritage and the broader human story.

Leisure and Social Activity: It's a popular and enriching way to spend a day, either alone for contemplation or with friends and family for a shared experience.

18.一个你的好朋友

A great friend who is important to you

You should say:

Who he/she is

How/where you got to know about him/her

How long you have known each other

And explain why he/she is important to you

I'd like to talk about my closest friend, Leo. He has been a pivotal figure in my life for well over a decade.

We first crossed paths in our high school biology class. We were assigned as lab partners for a dissection project, and let's just say that facing that challenge together created an instant bond. Our friendship, however, truly solidified when we discovered a shared passion for rock music and basketball. We spent countless afternoons after school either on the court or discussing our favorite bands.

We've known each other for about twelve years now. It's remarkable to think about how we've transitioned from awkward teenagers to working adults side by side. We've witnessed each other's journeys through pivotal life stages, from the pressures of university entrance exams to navigating our first careers and relationships.

The reason Leo is so important to me transcends mere shared history. Firstly, he is my most trusted confidant and sounding board. I can discuss anything with him without fear of judgment, whether it's a trivial daily frustration or a profound life dilemma. He possesses an innate ability to offer perspective, sometimes by just listening, and other times by giving brutally honest, yet always well-intentioned, advice.

Secondly, and perhaps more importantly, he has been my staunchest supporter and motivator. There was a period after

graduation when I felt utterly lost about my career direction. While I was full of self-doubt, Leo was the one who consistently pointed out my strengths and encouraged me to take calculated risks. His unwavering belief in me often gave me the courage to believe in myself. He doesn't just celebrate my successes; he helps me navigate my failures, reminding me that my worth isn't defined by a single setback.

In essence, our friendship is a cornerstone of my life. It provides a unique combination of unconditional support, intellectual stimulation, and profound emotional security that is truly irreplaceable.

Part3

1.What are advantages of making friends at different life stages?

Making friends at different life stages enriches a person's life in diverse ways. Each stage offers unique perspectives:

Childhood Friends: They know your roots and formative years, providing a sense of continuity and shared history that is irreplaceable.

University/College Friends: These friendships are often forged through intellectual growth and the shared experience of becoming independent, broadening your worldview.

Workplace Friends: They understand the specific challenges and dynamics of your professional life, offering practical advice and support.

Friends Made Later in Life: (e.g., through hobbies or travel) They often connect with a more mature and settled version of you, bringing fresh interests and perspectives that can be incredibly stimulating.

This diversity ensures a well-rounded support system and prevents a person from becoming stuck in a single social or ideological bubble.

2.Do you think it is better for children to have a few close friends or casual friends?

This is an interesting debate. I believe quality trumps quantity when it comes to childhood friendships. Having a few close, dependable friends is more beneficial for a child's emotional development. These deep bonds provide a safe space for them to build trust, learn empathy, practice conflict resolution, and develop a strong sense of self-worth. They learn the value of loyalty and intimacy.

That said, having a wider circle of casual friends also has its merits. It helps children develop social skills, adaptability, and

the ability to navigate different group dynamics. It exposes them to diverse perspectives and interests.

Ultimately, a healthy balance is ideal. A child with a small core of truly close friends for deep connection, complemented by a broader social network for fun and variety, is in a great position to develop into a well-rounded social being.

3.Do you think a child's relationship with friends can be replaced by that with other people, like parents or other family members?

No, I don't believe these relationships are interchangeable; they serve distinct and complementary roles in a child's life. The relationship with parents and family is primarily vertical, based on care, protection, and authority. It provides a foundation of safety and unconditional love. However, friendships are horizontal relationships among equals. It is within these peer relationships that children learn crucial lessons they can't fully learn from adults: how to negotiate, cooperate, compete healthily, and assert their own identity outside the family unit.

A friend is often the first person a child confides in about something they might not tell their parents, for fear of judgment or punishment. This independent emotional outlet

is vital for developing autonomy. While family provides the anchor, friends are the fellow ships with whom a child learns to sail the social seas. Both are essential, but one cannot replace the unique functions of the other.

4.ls it possible that employees make friends with their boss? How do children make friends?

Employees and Bosses: It is possible but inherently complex and relatively rare. A genuine friendship requires a balance of power and mutual vulnerability, which is difficult to achieve when one person holds significant authority over the other's career and income. While a friendly, respectful, and trusting relationship is ideal and beneficial, a true deep friendship can lead to complications, such as perceptions of favoritism or difficulties in having difficult professional conversations. It requires exceptional emotional intelligence from both parties.

How Children Make Friends: Children make friends in a much more direct and organic way. Their primary methods are:

Proximity: They befriend those they see regularly, like classmates or neighbors.

Shared Activities: Friendship forms naturally through playing the same game, joining the same sports team, or sharing a common interest like a favorite cartoon.

Directness: A child will often simply walk up to another and say, "Do you want to play?" or "I like your toy." There are very few social barriers.

19.一个你尊敬有想象力的人

A creative person whose work you admire

(e.g.artists or musician)

You should say.

Who this person is

How you knew him/her

What creative work he/she does

And explain why you admire him/her

The creative person I deeply admire is the legendary Japanese animation director, Hayao Miyazaki. He is the co-founder of Studio Ghibli and the mastermind behind some of the most beloved animated films in the world.

I was first introduced to his work during my childhood when my cousin showed me a DVD of My Neighbor Totoro. The sheer charm and imagination of that film left a lasting impression on me. Since then, I've actively sought out and watched almost all of his films, such as Spirited Away, Princess Mononoke, and Howl's Moving Castle.

Miyazaki's creative work is in crafting breathtakingly beautiful and profoundly imaginative animated films. Unlike many mainstream animations, his works are not created on computers but are predominantly hand-drawn, giving them a unique, organic texture. He is involved in every aspect of the filmmaking process, from writing the script to drawing the storyboards.

The reasons I admire him are multifaceted. Firstly, it's his boundless and unique imagination. He creates entire worlds that are both fantastical and feel utterly real, populated with unforgettable characters like the soot sprites, the River Spirit, and the enigmatic No-Face. His worlds operate on a logic of dreams and nature, which is incredibly captivating.

Secondly, and more importantly, I admire the profound themes woven into his stories. His films often explore

complex issues like humanity's relationship with nature, the horrors of war, the complexities of good and evil, and the journey of growing up. He never talks down to his audience, whether they are children or adults. His female characters are particularly noteworthy—they are strong, independent, and complex, breaking the mold of the traditional damsel in distress.

Finally, I admire his uncompromising dedication to his craft. He is known for his perfectionism and his steadfast belief in the power of hand-drawn animation to convey emotion. In an era dominated by CGI, his commitment to his artistic vision is truly inspiring. He doesn't just make movies; he creates timeless works of art that inspire wonder, thought, and a deep sense of empathy.

Part3

1.Should children learn painting or drawing?

Absolutely, I believe it is highly beneficial for children. Learning painting or drawing is not merely about training future artists; it's a fundamental form of cognitive and emotional development. It helps children develop fine motor skills, hand-eye coordination, and visual-spatial awareness. More importantly, it serves as a vital non-verbal outlet for

专业雅思教学，最全课前课后辅导，100 留学，全心为你

their emotions and imagination. It allows them to express feelings and ideas they might not yet have the words for, fostering creativity and problem-solving skills in a way that structured academic subjects often do not.

2.What are advantages of learning painting or singing for children?

The advantages span multiple domains of a child's growth:

For Painting/Drawing:

Cognitive: Enhances observation skills, critical thinking, and the ability to concentrate for extended periods.

Emotional: Provides a therapeutic outlet for self-expression and builds confidence through the act of creation.

For Singing:

Linguistic: Improves language skills, pronunciation, and memory through learning lyrics.

Social and Emotional: Boosts self-esteem, teaches breath control which can reduce anxiety, and in a group setting (like a choir), it fosters a powerful sense of community and teamwork.

Both activities cultivate discipline and patience, as mastering any art form requires practice and perseverance.

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

专业雅思教学，最全课前课后辅导，100 留学，全心为你

3.Do you think people should encourage children to learn musical instruments?

Yes, I strongly believe so, provided the encouragement is positive and not forceful. Learning a musical instrument offers a unique set of benefits. Scientifically, it's known to stimulate brain development, enhancing areas related to language, reasoning, and memory—often referred to as the "Mozart effect."

Beyond the cognitive benefits, it teaches children invaluable life skills such as discipline, time management, and the value of sustained effort. The process of progressing from making simple sounds to playing a complete piece provides a tremendous sense of achievement and resilience. However, the key is to foster a genuine interest. Forcing a child can lead to resentment. The goal should be to expose them to music and let them find an instrument they connect with, making the learning process a joyful and enriching part of their holistic development.

20.一个你意外弄坏的东西

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

专业雅思教学，最全课前课后辅导，100 留学，全心为你

A time when you broke something by accident

You should say:

What it is

How you broke it

How you felt at that time

And explain what you did after you broke it

I'd like to talk about the time I accidentally broke my father's favorite ceramic tea cup. It wasn't just any cup; it was a piece from a matching set he had brought back from a business trip to Jingdezhen, a city famous for its porcelain.

It happened about two years ago. I was washing the dishes after a family dinner, and my mind was preoccupied with an upcoming work project. I had just finished washing the cup and was drying it with a cloth. As I was putting it away on a high shelf, my hand slipped. The cup slipped from my grasp, hit the edge of the counter with a sharp "crack," and shattered into several large pieces on the kitchen floor. Time seemed to slow down in that moment.

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

My immediate feeling was one of sheer horror and panic. My heart sank. I froze for a second, just staring at the broken pieces, unable to believe what had just happened. This was followed by a wave of guilt and dread. I knew how much that tea set meant to my father; he used it for special occasions and valued it for its craftsmanship and the memory attached to it. I felt incredibly clumsy and irresponsible for not being more careful.

After the initial shock, I knew I had to take responsibility. First, I carefully picked up all the fragments to avoid anyone getting hurt. Then, I didn't try to hide it. I went straight to my father, who was reading in the living room, and confessed what had happened. I apologized sincerely, explaining that it was a complete accident but that I was truly sorry for my carelessness. I offered to try and find a replacement online or have it professionally repaired, even though I knew it could never be exactly the same.

His reaction was understanding, though I could see he was disappointed. He appreciated my honesty and told me not to worry too much about it. In the end, we couldn't find an exact replacement, but the experience taught me a valuable lesson

about mindfulness and the importance of taking immediate responsibility for my mistakes, even the accidental ones.

Part3

1.What types of goods are typically produced in modern factories?

Modern factories are highly diversified, but they typically mass-produce a vast array of goods. This includes:

Consumer Electronics: Such as smartphones, laptops, and televisions.

Automobiles and Parts: From entire vehicles to specific components like engines and dashboards.

Fast-Moving Consumer Goods (FMCG): Like packaged foods, beverages, toiletries, and household cleaning products.

Textiles and Apparel: Clothing, shoes, and fabrics are predominantly factory-made.

Pharmaceuticals: Medicines and medical devices are produced in highly sterile and regulated factory environments.

专业雅思教学，最全课前课后辅导，100 留学，全心为你

The common thread is standardization and scale, producing large quantities of identical or similar items efficiently.

2.Do factories usually rely on machines or manual labor for production?

The modern factory model overwhelmingly relies on a hybrid approach, but with a heavy emphasis on automation and machinery. Highly repetitive, precise, and dangerous tasks are almost exclusively performed by machines, robots, and automated assembly lines. This ensures consistency, speed, and safety.

However, manual labor is still crucial for roles that require dexterity, problem-solving, and oversight. This includes quality control inspections, machine maintenance, programming the automated systems, and handling complex or custom assembly that robots cannot yet manage efficiently. The trend is moving towards even greater automation, with human workers shifting more towards supervisory and technical roles.

3.Which do you think is better for production: using machines or making things by hand? why?

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

专业雅思教学，最全课前课后辅导，100 留学，全心为你

This isn't a question of one being universally "better"; they serve different purposes and markets, each with distinct advantages.

Machine-based production is superior for:

Scale and Efficiency: Producing large volumes of standardized goods at a low cost per unit.

Precision and Consistency: Ensuring every product is identical, which is critical in industries like electronics and pharmaceuticals.

Safety: Taking over dangerous tasks that could harm human workers.

Handmade production is superior for:

Quality, Uniqueness, and Craftsmanship: Each item is unique, with a soul and character that machines cannot replicate. This is valued in luxury goods, art, and custom furniture.

Skill Preservation: It keeps traditional crafts and skills alive.

Sustainability: Often uses fewer resources and has a smaller carbon footprint than large-scale factories.

官微：@雅思屠鸭哥 公众号：IELT 屠鸭哥 知乎：雅思屠鸭哥

The "better" method depends on the goal. For supplying the mass market with affordable, consistent goods, machines are better. For creating unique, high-value, and culturally significant items, the human touch is irreplaceable. An ideal economy has a balance of both.

21.一个接触到自然的户外之地

An outdoor place that you can get to the nature

You should say:

Where it was

When you went there

Why you went there and did the activity

And explain how you felt about it

The outdoor place I'd like to describe is the West Lake in Hangzhou. It's not a wild wilderness, but a perfect example of

how nature and human artistry can blend seamlessly, offering a profound natural escape right within a city.

I visited there this past autumn, specifically in October, which is arguably the best time to go. The summer heat had subsided, and the air was crisp and clear.

I went there with a couple of close friends. Our primary goal was to escape the relentless pace and concrete jungle of our own metropolis. We were craving a dose of natural beauty and a peaceful retreat. The activity we chose was to rent bicycles and cycle around the lake, which is a fantastic way to absorb the scenery at your own pace.

The experience was utterly rejuvenating. As we cycled along the causeways, we were surrounded by a postcard-perfect landscape. We saw the ancient Leifeng Pagoda silhouetted against the hills, willow trees dipping their branches into the water, and lotus leaves covering parts of the lake's surface. The feeling was a mix of absolute tranquility and sensory delight. The sound of the wind rustling through the leaves and the sight of mist hanging over the water in the morning were

a world away from the traffic noise and digital screens we were used to.

What made it so special was that it wasn't just about observing nature; it was about being immersed in it. We stopped frequently to just sit on a bench and watch the world go by. We breathed in the fresh, clean air and felt the warm autumn sun on our skin. It was a powerful digital detox and a reset for our minds. I felt a deep sense of peace, my stress simply melted away, and I was reminded of the timeless beauty that exists beyond our urban routines. It was more than a tourist trip; it was a therapeutic journey that left me feeling physically invigorated and mentally refreshed.

Part3

1.What do you think could children do outdoor?

There's a wealth of beneficial activities children can do outdoors. Fundamentally, they can engage in unstructured play—running around in a park, climbing trees, or building forts, which sparks creativity and physical development. More structured activities like organized sports (soccer, basketball) teach teamwork and discipline. Furthermore, simple nature exploration is incredibly valuable; they can go on scavenger

hunts to identify different leaves and insects, or try bird-watching. These activities not only promote physical health but also foster a lifelong connection with and appreciation for the natural world.

2.Do you think people in city can get close to nature?

Yes, absolutely, though it requires more conscious effort. Cities are increasingly incorporating green infrastructure to make this possible. People can get close to nature in urban parks, botanical gardens, and along riverfront pathways. Many cities also have community gardens where residents can grow their own plants. For a more immersive experience, city dwellers can take short trips to nearby national parks, forests, or beaches on weekends. So, while it's not as readily available as stepping into one's backyard in the countryside, with a bit of initiative, people in cities can definitely maintain a meaningful connection with nature.

3.Do you think vegetarians are protecting nature?

A vegetarian diet can be a form of environmental protection, but it's a piece of a larger puzzle. The livestock industry is a significant contributor to greenhouse gas emissions, deforestation, and water consumption. Therefore, by reducing or eliminating meat consumption, vegetarians are

undoubtedly making a positive environmental choice by lowering their personal ecological footprint.

However, it's not the only way, and the impact can vary. For instance, importing out-of-season fruits and vegetables by air can also have a high carbon cost. So, while vegetarianism is a commendable and effective individual action for nature conservation, comprehensive environmental protection requires broader systemic changes in energy, transportation, and industrial agriculture.

4.Does your country care about the nature?

There's a growing and very serious awareness and effort in my country regarding environmental protection. The government has implemented ambitious national policies like the "Double Carbon" goal (peaking carbon emissions before 2030 and achieving carbon neutrality before 2060). We've seen massive investments in renewable energy, reforestation projects, and the establishment of a national park system to protect biodiversity.

At the grassroots level, public consciousness is also rising. There's increased participation in recycling, a growing popularity of eco-friendly products, and more people

choosing public transportation or electric vehicles. While there are still significant challenges, particularly with pollution and resource management, it's clear that both the government and the people are increasingly prioritizing the health of our natural environment for future generations.

22.一个你敬佩的运动员

A famous sportsperson you admire

You should say:

Who this person is

What you know about him/her

What achievement he/she has done

And explain why you admire him/her

The famous sportsperson I truly admire is Yao Ming, the legendary Chinese basketball player. He is a retired professional who became a global icon and is now the President of the Chinese Basketball Association.

I've followed his career since I was a child. I know that he was born in Shanghai and started his professional career with the

Shanghai Sharks. His exceptional height and skill quickly caught international attention. He was selected as the first overall pick by the Houston Rockets in the 2002 NBA draft, which was a historic moment for Asian athletes.

His achievements are monumental. In the NBA, he was an 8-time All-Star and is widely considered one of the best centers of his era. He averaged 19 points and 9.2 rebounds per game over his career, which are stellar statistics. However, his greatest achievement transcends statistics. He single-handedly bridged the cultural gap between China and the NBA, popularizing basketball to an unprecedented degree in China and across Asia. He was the key that unlocked the massive Chinese market for the league.

The reasons I admire him go far beyond his basketball prowess. Firstly, I admire his intelligence and eloquence. Facing immense media pressure in the US, he never shied away. Instead, he won people over with his sharp wit, humility, and perfect use of self-deprecating humor during interviews. He was not just an athlete; he was a diplomat.

Secondly, and more importantly, I admire his character and his post-retirement contributions. After his career was cut short by injuries, he didn't just fade away. He used his fame

and intelligence to drive change. As the President of the CBA, he is actively reforming Chinese basketball. Furthermore, he is a dedicated philanthropist and environmentalist, leading campaigns against the illegal trade of elephant ivory and rhino horns. He leveraged his fame for a greater good. Yao Ming is a true role model who demonstrates that a sportsperson's greatest legacy can be the positive impact they make off the court.

Part3

1.What sports do Chinese usually do? why?

Chinese people engage in a variety of sports, largely influenced by convenience, cost, and cultural factors.

Badminton and Table Tennis: These are extremely popular grassroots sports. The reasons are practical: they require relatively little space and equipment, can be played indoors away from pollution, and are deeply embedded in the national culture, especially table tennis, which has a storied history of success for China.

Basketball: Its popularity has skyrocketed, largely thanks to the influence of Yao Ming and the NBA. Public basketball courts are ubiquitous in cities, making it a favorite team sport for young people.

Running and Square Dancing: For the general public, especially the elderly, these are dominant activities. Running is a simple, individual exercise, while square dancing is a hugely popular social activity in public spaces every evening, promoting both fitness and community among older adults.

2.Should students have physical education and do sports at school?

Absolutely, without a doubt. Physical Education is as crucial as academic subjects for a student's holistic development. Its importance is threefold:

Physical Health: In an era where childhood obesity and myopia are rising, PE classes are essential for ensuring students get regular exercise, develop motor skills, and build healthy habits for life.

Mental Well-being: Sports provide a vital outlet for releasing academic stress and anxiety. Physical activity is proven to improve mood, concentration, and overall cognitive function, which can actually enhance academic performance.

Social Skills: Team sports teach invaluable lessons in cooperation, leadership, discipline, and how to handle both victory and defeat.

3.Some schools don't set sports courses, why?

This unfortunate situation, though increasingly rare, usually stems from two primary pressures:

Intense Academic Competition: The paramount importance placed on standardized test scores (like the Gaokao) creates immense pressure to allocate every possible minute to core academic subjects. In this context, PE is often seen as a dispensable "frill" that takes away from study time.

Resource Constraints and Liability Concerns: Some schools, especially in underfunded areas, may lack the facilities, equipment, or qualified PE teachers. Additionally, schools might be overly cautious about the potential for student injuries during sports and the ensuing legal liability, leading them to minimize physical activities.

4.What kind of sports are unsuitable for children? why?

Sports that are unsuitable for children are typically those that pose excessive physical risk or demand an inappropriate level of intensity for developing bodies.

High-Impact Contact Sports: Sports like boxing, rugby, or ice hockey carry a significantly high risk of concussions and serious injuries. A child's skeleton, brain, and coordination are still developing, making them more vulnerable.

Extreme Endurance Sports: Activities like marathon running or intense weightlifting can put too much strain on a child's growing joints, bones, and cardiovascular system, potentially leading to long-term damage.

Highly Specialized, Year-Round Training in a Single Sport: While not a specific sport, this practice is unsuitable. It can lead to burnout, overuse injuries, and hinder overall physical development. For children, diversified physical play is healthier than early, intense specialization.

23.社交媒体上有趣的事情

Something interesting you discovered/found on social media

You should say:

What it was

Where you saw it

How you felt about it

And explain why you found it interesting

Something genuinely interesting I discovered on social media recently was a short video series about the art of traditional Chinese ink grinding. I stumbled upon it while scrolling through my Douyin (the Chinese version of TikTok) feed, which is often filled with trendy dances and comedy skits, so this was a refreshing anomaly.

The video showcased an artisan meticulously grinding an ink stick on an inkstone, adding water drop by drop. The entire process was filmed in a minimalist, almost meditative style, with close-ups on the texture of the ink and the rhythmic, circular motion of the grinding. There was no voice-over, just the soothing, ambient sound of the friction.

My initial feeling was one of surprise and instant calm. In the middle of a hectic day, the video created a bubble of tranquility. It was a stark contrast to the high-energy, fast-paced content that usually dominates the platform. I felt a sense of reverence for the craftsmanship and the slowness of the process, which felt like a form of active meditation.

I found it profoundly interesting for several reasons. Firstly, it was a brilliant example of how social media can be a vessel

for cultural preservation and education. It presented a traditional, almost forgotten art form in a modern, digestible, and visually appealing format, making it accessible and fascinating to a young audience who might otherwise never encounter it.

Secondly, it highlighted the philosophy behind the practice. The video's caption explained that in ancient times, the time spent grinding ink was used to mentally prepare for writing or painting, to calm the mind, and to focus one's intentions. This idea of "preparing the mind through preparing the tool" was a powerful antidote to our modern obsession with instant results. It made me reflect on the value of patience and the beauty of process-oriented activities in our result-driven world. That short clip was more than just a video; it was a poignant cultural lesson and a moment of mindfulness.

Part3

1.What are the advantages and disadvantages of social media?

Social media is a double-edged sword with profound impacts.

Advantages:

It allows people to maintain relationships with friends and family across the globe and find communities of shared interest.

Information and Awareness: It's a powerful tool for accessing news, learning new skills, and raising awareness about social and environmental issues.

Business and Entrepreneurship: It provides a low-cost platform for marketing, networking, and building a personal or business brand.

Disadvantages:

Mental Health Issues: It can lead to anxiety, depression, and poor self-esteem due to social comparison, cyberbullying, and the "fear of missing out" (FOMO).

Spread of Misinformation: False news and conspiracy theories can spread like wildfire, causing real-world harm.

Erosion of Privacy and Addiction: Users often sacrifice personal data, and the addictive design of these platforms can lead to wasted time and decreased real-world social interaction.

2.Who do you think shouldn't use social media?

While access should be a personal choice, I believe certain groups should be heavily restricted or monitored.

Young Children: They lack the critical thinking skills to navigate online risks, understand privacy, or cope with cyberbullying. Their development is better served by real-world play and interaction.

Individuals with Severe Addictive Tendencies or Mental Health Issues: For someone prone to addiction or suffering from anxiety/depression, social media can exacerbate their condition, creating a destructive feedback loop.

People Who Lack Digital Literacy: Those who cannot critically evaluate the information they see are highly vulnerable to scams and misinformation.

3.How often do you use social media?

I use social media on a daily basis, but I've become very intentional about it. I'd estimate I spend about 1 to 2 hours daily, often in short bursts. I primarily use WeChat for communication and Douyin/Red (Xiaohongshu) for entertainment and discovery. However, I've turned off most notifications to prevent mindless scrolling. I use it as a tool for specific purposes—checking messages, following specific news accounts, or looking for a recipe—rather than letting it use me.

4.Do you think you/your friends spend too much time on social media?

That's a thoughtful question. I think most people, including myself and my friends, probably spend more time than is ideally healthy on these platforms. It's not uncommon to see a group of friends physically together, yet all scrolling through their phones. There's a collective awareness that it can be a time sink and sometimes replaces deeper, more meaningful conversation.

However, I wouldn't label it a severe problem in my immediate circle. Many of my friends are also trying to be more mindful, setting screen time limits or having "phone-free" dinners. We recognize the value of disconnecting to reconnect with the present moment and each other. So, while we may occasionally overindulge, there's a conscious effort to strike a balance.

24.有用的书

A book you read that you found useful

You should say:

What it is

When you read it

Why you think it is useful

And explain how you felt about it

I'd like to talk about a book called Atomic Habits by James Clear, which I read about two years ago during my final year at university. At the time, I was feeling quite overwhelmed with assignments and exams, and a friend recommended it to me as a way to better manage my time and reduce stress. It's a self-help book that focuses on how small, daily habits can lead to significant long-term changes.

What I found really useful about it is how practical it is—it doesn't just give vague advice, but breaks down the process of building good habits and breaking bad ones into clear, actionable steps. For example, it introduces strategies like "habit stacking" and "the two-minute rule," which I started applying right away. I began by reading just two pages of a

textbook every night, and that small habit gradually turned into a consistent study routine without feeling forced.

Reading this book left me feeling motivated and more in control. Before, I used to set big goals and then feel discouraged when I didn't achieve them quickly, but Atomic Habits taught me to focus on the system rather than just the outcome. It really changed my perspective on personal growth and productivity. Even now, I still use some of the ideas from the book in my daily life, and it's something I've often recommended to others who want to make positive changes in a manageable way.

Part3

1.What are the types of books that young people like to read?

I think it varies a lot, but many young people nowadays enjoy fantasy or science fiction series, like Harry Potter or books by authors like John Green. Also, with social media trends, young readers often pick up self-help books or memoirs that relate to personal growth or mental health—topics that feel relevant to their own lives.

2.What should the government do to make libraries better?

Well, governments could invest more in updating library facilities—for example, providing faster internet, more computers, or even creating cozy spaces for reading and group study. Besides that, they could organize more community events, like author talks or workshops, to attract different age groups and make libraries feel more like cultural hubs rather than just quiet book storerooms.

3.Do you think old people spend more time reading than young people?

Generally, yes, I'd say so. Older people often have more leisure time, especially after retirement, so many of them enjoy reading as a way to relax or stay mentally active. Young people, on the other hand, tend to have busier schedules with work or study, and they might spend more time on digital entertainment like videos or social media. But of course, there are always exceptions.

4.Which one is better, paper books or e-books?

I don't think one is necessarily better—it really depends on personal preference and situation. Paper books are great for focused reading and don't cause eye strain, while e-books are

more convenient for traveling or storing lots of titles in one device. I personally like both: paper books for enjoyment, and e-books for practicality.

5.Have libraries changed a lot with the development of the internet?

Definitely. Libraries aren't just about borrowing physical books anymore. Many now offer e-book loans, online databases, and even digital workshops. The role of librarians has also shifted—they often help people navigate online resources or use software. So in a way, libraries have adapted to stay relevant in the digital age.

6.What should we do to prevent modern libraries from closing down?

I believe the key is to make libraries more versatile and community-oriented. For example, they could host more events like reading clubs, tech training sessions for seniors, or even local art exhibitions. Also, promoting their digital services and free access to knowledge—especially for students or low-income families—could help people see libraries as essential public resources, not outdated institutions.

25.别人帮忙做的决定

An important decision made with the help of other people

You should say:

What the decision was

Why you made the decision

Who helped you make the decision

And how you felt about it

I'd like to talk about a decision I made with the help of my university professor and my parents about which master's program to pursue after graduating. This was a big choice for me because it would shape my career path, and I felt quite uncertain about which direction to take.

At the time, I had received offers from two different programs—one in Data Science and another in Business Analytics. Both seemed interesting and promising, but I was struggling to figure out which one would be a better fit for my skills and long-term goals. I knew I needed to make a thoughtful decision, so I reached out to my academic advisor, Professor Wang, who had taught me in my final year and

knew my academic strengths well. He helped me break down the course structures, career outcomes, and even connected me with some former students from each program so I could hear about their experiences.

At the same time, I also discussed it with my parents. They didn't pressure me but asked me thoughtful questions about what I really enjoyed studying, where I saw myself in five years, and how each program aligned with my interests. Their perspective helped me consider practical factors like location, costs, and future opportunities in the job market.

In the end, with their guidance, I chose the Data Science program. Looking back, I feel very grateful for their help because I don't think I would have been as confident making that choice alone. It taught me that sometimes seeking advice isn't a sign of weakness—it's a way to make a more informed and balanced decision. Now, whenever I face a big choice, I still tend to talk it through with people I trust.

Part3

1.What kind of decisions do you think are meaningful?

I think decisions that have a long-term impact on a person's life are especially meaningful—like choosing a career path, deciding where to live, or even committing to a long-term relationship. These choices shape who we become and how we live, so they often require careful thought and sometimes courage.

2.What important decisions should be made by teenagers themselves?

I believe teenagers should be encouraged to make decisions about their personal interests, such as what subjects to study, which hobbies to pursue, or even how to manage their free time. These choices help them develop a sense of identity and responsibility. Of course, parents can offer guidance, but allowing teens to have a say in matters that affect their daily lives is important for their growth.

3.Why are some people unwilling to make quick decisions?

Some people prefer to take their time because they worry about making mistakes or facing negative consequences. They might want to gather more information, weigh all the options, or consider different opinions before committing. In

some cases, it could also be due to personality—for example, naturally cautious people tend to avoid rushing into things.

4.Do people like to ask for advice more for their personal life or their work?

It probably depends on the person and the situation. In my experience, people often seek advice for work-related decisions—like career moves or professional challenges—because these can involve complex factors and other people's expectations. For personal matters, some may prefer to keep things private or rely on close friends or family instead.

5.Why do some people like to ask others for advice

I think most people ask for advice because they value outside perspectives, especially when they feel uncertain or lack experience. Getting input from others can help clarify thoughts, reveal options they hadn't considered, or simply provide reassurance. It's also a way to learn from someone else's experience, which can make decision-making feel less daunting.
